Sublime Security

Next-Gen Email Security

THE FUTURE OF EMAIL SECURITY IS AGENTIC.

Block advanced email attacks and slash response times with an adaptive platform that combines AI Agents, machine-learning models, and continuously updated detection rules tuned to your environment.

WHY NOW?

YOUR ATTACK SURFACE HAS EVOLVED. YOUR DEFENSE MUST TOO.

AI-driven attacks are the new reality.

They are now involved in 1 in 6 data breaches, with attackers using GenAI to create convincing phishing emails in minutes, not hours.

One-size-fits-all security is broken.

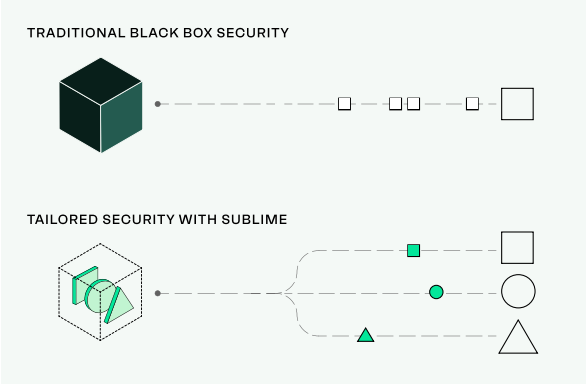
Malicious emails are increasingly customized for each target, requiring defenses that are context-aware and rapidly adaptable.

THE DIFFERENCE

EVOLVE BEYOND THE VENDOR BLACK BOX.

Legacy tools use centralized, one-size-fits-all models that are opaque and slow to adapt—leaving you dependent on vendor updates that may never arrive, creating coverage gaps and blind spots.

Sublime's Distributed Detection Model (DDM) delivers environment-specific protections with radical transparency, offering automation by default with visibility on demand.



CORE OUTCOMES

Prevent more threats

Stop BEC, QR lures, and zero-day variants with tailored coverage instead of one-size-fits-all rules.

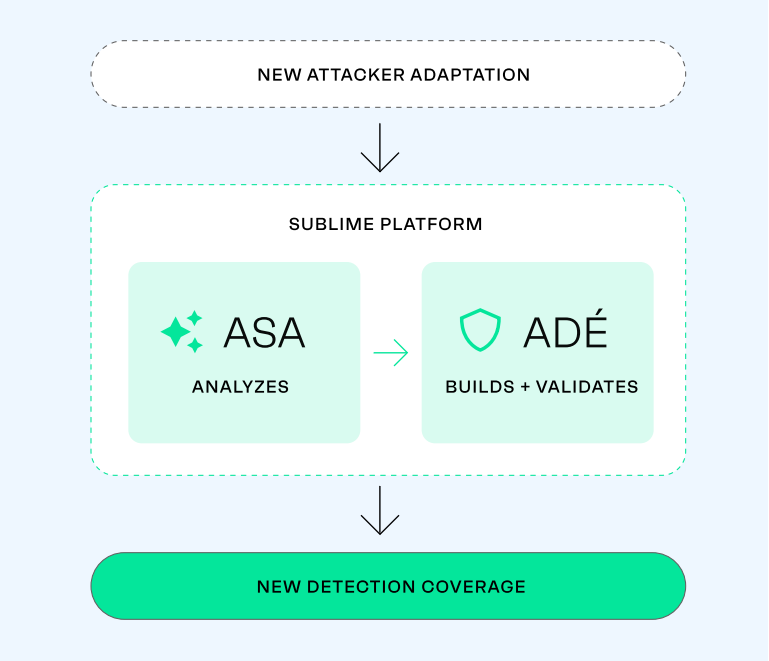
Detect & respond faster

Slash response times and escalations. Our Autonomous Security Analyst (ASA) automatically handles triage, investigation, and remediation.

Adapt faster than attackers

Continuously stay ahead of new threats. Our Autonomous Detection Engineer (ADÉ) turns novel threat intelligence from your environment into new, specific protections in real-time—no vendor delays.

HOW IT WORKS



AGENTIC SECURITY

A continuously improving defense

The Sublime architecture creates a virtuous cycle. Our adaptive detection engine stops known and emerging threats at scale, while our AI Agents, the Autonomous Security Analyst (ASA) and Autonomous Detection Engineer (ADÉ), learn from any hacker adaptations in your environment to automatically generate new, tailored protections. Your security posture continually improves, without requiring manual effort.

The ROI of autonomous Security

Sublime allows you to prevent more threats and respond faster with with trusted AI automation and full transparency. Gain higher efficacy with tailored rules, slash response times with automated triage, and lower operational costs while improving detection coverage with AI agents.

ENTERPRISE FIT

01

Deploy anywhere

SaaS, single-tenant SaaS, or customer-hosted (VPC); API-based or inline; no MX changes; regional options for data residency.

02

Integrate & automate

Export rich telemetry to your SIEM/SOAR via a full REST API.

03

Transparent & auditable

Every decision is linked to its underlying reasoning, providing the transparency your team needs to trust the automation and act immediately.
