

Windows Modern Management

User experience drives modern management with Microsoft Cloud

Key Benefits

- Improved IT efficiency and cost savings
- Enhanced user productivity and satisfaction
- Take advantage of modern features including AutoPilot
- Fewer helpdesk calls and tickets
- Knowledge transfer, enablement, collaboration
- Rapid migration of workloads to Cloud-based digital platforms
- More time for senior IT staff to focus on priority tasks

Windows Modern Management integrates Windows 10 / 11 Enterprise with Microsoft 365 cloud services to simplify the provision, management and support using the appropriate combination of tools, including SCCM, Endpoint Configuration Manager, Intune and Windows Autopilot.

NextGen UX consultants provide organisations with experience and guidance to enabling a modern approach to empower users to be productive from anywhere and always up-to-date, while keeping enterprise data and assets secure.

**Defend against
cyberthreats.**

**Protect
business data.**

**Secure
your devices.**

Microsoft Intune gives you a diverse set of tools for managing your complex end point environment. Intune's innovative combination of application and device management options gives you flexibility in how you manage and secure mobile productivity.

Windows 10 Management Principles

- Reduce Total Cost of Ownership through Intune/Cloud Management and Azure Active Directory for identity
- Provide rich IT insights through data and telemetry for business enablement (Upgrade Analytics, Defender Advanced Threat Protection)
- Empower and delight end users (self provisioning with AAD Join, Windows Store for Business for applications, Windows Hello for authentication)

NextGen UX can guide you through the assessment of, and transition and transformation to Windows Modern Management, and can help you to drive down the cost of managing your infrastructure, freeing you to maximise the business value from your IT.
