

Microsoft 365 Software Asset Management

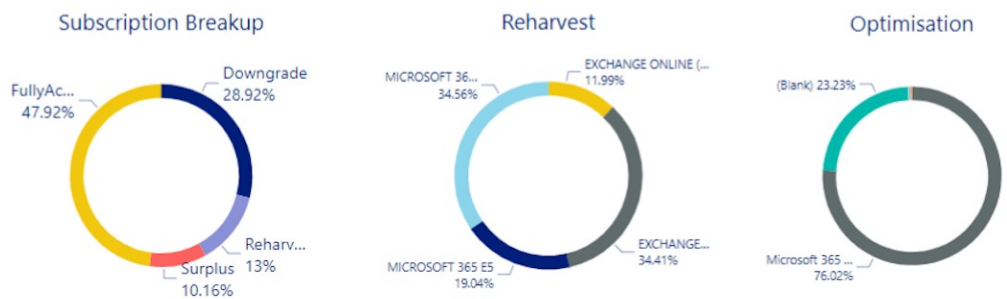

Increase your software asset management strategy by optimising M365 usage

Key Benefits

- Increase cost savings and license optimisation
- Identify the best Microsoft 365 subscription for every user
- Fast set up process with easy to understand results.
- Provides the granularity to be able to make specific decisions about improving the services and costs
- Improve user adoption for applications and services
- Learn where you stand with a free 30 day trial

Software compliance focuses on the inventory of your software and what you are paying for versus what you are using, yet research shows that many businesses do not track or monitor their Microsoft 365 usage, wasting IT budget in the process. Likewise, users may not be benefiting from the software they are entitled to. This means businesses are not using what they pay for.

NextGen UX have partnered with TBSC to help organisations recognise and manage the key factors for Microsoft 365 license optimisation. These include: lapsed users, non-allocated applications, poor staff training, compliance or users on the wrong M365 subscription.

Smarter SaaS for M365 is a cloud-based solution that optimises Microsoft 365 subscriptions. This service automatically recommends how to reduce IT costs whilst finding the best Microsoft 365 subscriptions for every user.

- **Re-harvesting** - Subscriptions which have not been used and could be re-allocated or cancelled in order to control costs. This process will aid both cost control and security by ensuring people leaving the organisation no longer have access to IT systems and data once they have left.
- **Optimisation** - Based on active users who are not using all the facilities of their subscription type, wasting part of the value of the subscription. This can be addressed by helping the users to use their full facilities or downgrading their subscription to a lower cost type that meets their needs.
- **Surplus** - Subscriptions are those which are being paid for but have not been provisioned for users. For surplus subscription they can either be deployed to users cancelled for cost saving.

Using our tool Smarter SaaS for Microsoft 365 to explore your re-harvesting, surplus, and optimisation opportunities would greatly help benchmark where you are at and offer solutions on how to improve your Microsoft 365 spend.
