

Kyndryl Managed Oracle Applications

Like all top businesses today, you rely on the power of enterprise applications for key business functions and operational efficiency—but extracting their full value isn't always easy. As enterprise application suites grow in scope and complexity, organisations need to meet critical imperatives and will face many obstacles in managing their complex application environments. Running applications and keeping them going can be time-consuming and expensive to manage in-house, draining hours and resources better spent on increasing revenue and expanding your business.

Kyndryl™ Managed Oracle Applications on Oracle Cloud Infrastructure is designed to address the challenges you may face while running Oracle applications while also enabling cloud transformation by migrating, protecting, and managing your Oracle enterprise applications and workloads.

Get more from your Oracle applications

In a traditional IT environment, extracting the full value of enterprise applications isn't always easy. When opportunities arise, it can be difficult to pivot and adapt your application infrastructure while maintaining cost control. CIOs and IT teams are facing more pressure than ever to increase innovation and improve services as enterprises around the world struggle long lead times for provisioning, the high cost of servers and storage, and a shortage of required skills.

Organisations can undoubtedly extract more value from applications by expanding cloud resources and reach—but deploying Oracle applications in the cloud comes with its own set of challenges.

Lifecycle management complexities created by aging Oracle infrastructure

Need for an integrated ecosystem for Oracle applications and solutions

Lack of a cost-effective managed service solution with a cloud-based OPEX model

Key business needs

- Get services to market faster
- Optimise business processes
- Improve security and compliance
- Manage a broad set of applications
- Improve customer experience

What's standing in the way?

- Lack of skills and infrastructure
- Need for day-to-day management
- Competition
- Globalisation
- New business models

Kyndryl Managed Oracle Applications

Kyndryl can help. Our managed services for Oracle applications provide a scalable, managed hosting and support model. Our approach to application management includes monitoring and management of servers, operating systems, storage, and the network to improve the performance, efficiency, security of Oracle applications while also future-proofing your application investment through optimisation and strategic insight. By deploying on one of the largest global networks of data centers available, Kyndryl can manage your Oracle applications to reduce complexity and cost while enhancing the overall operations of the cloud environment.

Let Kyndryl be your single, integrated vendor for Oracle Cloud Infrastructure and applications. We support a range of infrastructure options to prevent disruption in case you need to shift to a different service delivery model as needs change. Our solutions are backed by our world-class client support model, robust connectivity options, and enterprise-class security for global data centers and network that help us keep your technology up to date to manage security and compliance risks and increase uptime.

Avoid large capital expenses

Our managed services for Oracle applications are designed to help organisations reliant on existing or on-premises infrastructure offerings to leverage resources quickly and economically on Oracle Cloud Infrastructure. This option avoids large capital expenses and re-platforming risks when moving Oracle workloads to the cloud, while Oracle Cloud Infrastructure helps integrate Oracle applications into the Oracle technology framework.

Experience the proven performance of Oracle Cloud with reliable managed services from Kyndryl. We'll help you drive efficiencies with standard, flexible, usage-based services available on demand and deployed where you need them. API access to emerging technologies further optimises the value of Oracle application, while automation and tooling deliver fast, accurate access to the resources you need.

Kyndryl Managed Oracle Applications

Features

- Standards-based services
- Built-in automation
- API access to emerging technologies
- Configuration variety
- Adaptable platform
- Cloud-native services
- Multicloud deployment options

Benefits

- Managed service
- Avoid large, upfront capital expenses
- Access to industry leading Oracle skills
- Predictable performance
- Get services to market faster
- Easy integration between Oracle applications and Oracle Cloud Infrastructure

Why Kyndryl?

We work side by side with our customers to design, build, manage, and modernise the vital technology systems that the world depends on every day. With more than 30 years of IT services experience, 90,000+ skilled practitioners worldwide, and strategic alliances with industry-leading partners, Kyndryl is uniquely positioned to innovate at scale while delivering exceptional outcomes for our customers.
