

A woman with long dark hair, wearing a red sweater and a silver watch, is seated at a wooden table. She is looking off to the side with a thoughtful expression. In the foreground, a blue pen and some papers are visible on the table.

Kyndryl Cybersecurity Consultancy Services

Rapidly evolving IT environments make it an imperative for organisations to identify, prioritise, and respond to cybersecurity and compliance risks across the entire IT landscape. Organisations need to be able to protect their systems, data, and reputation through robust security, regulatory compliance, and risk management practices.

Kyndryl™ Cybersecurity Consultancy Services are designed to help manage your organisation's security health and hygiene, keep your business and data protected in a hybrid multicloud world, and get ahead of compliance needs. With deep expertise in people, process, technology, and governance, we'll help you keep your organisation protected so you can grow your business with confidence.

Cybersecurity challenges

Organisations face significant challenges with managing the security and compliance aspects of hybrid cloud IT environments. High digital business growth and rapid migration to cloud is creating pressure for more robust security and compliance policies. Cyberattacks are on the rise, and the sophistication of the attack techniques and the growing use of machine learning make it more important than ever to recognise and respond as quickly as possible.

In addition, there has been significant growth in cyber and privacy reporting regulations following the introduction of the General Data Protection Regulation (GDPR) act. These regulations impose standardised breach notifications to both regulators and affected consumers in the event of a data breach or loss of personal data, as well as specific timelines for reporting.

With the growing threat of cyberattack and increasing pressure for regulatory compliance, organisations also face significant challenges in recruiting and retaining skilled security analysts. Combined with the growing number of security and IT operations tools security analysts are expected to operate, this shortage is driving operational challenges inside security teams and placing organisations at increased risk.

Kyndryl Cybersecurity Consultancy Services

Cybersecurity services from Kyndryl can help transform your security position with our cyber resilience portfolio and consultancy offerings. Our skilled engineers and consultants provide a wide range of complementary security services, including:

Security assurance services

Assess and benchmark the maturity of your resilience posture while gaining visibility into significant threats and vulnerabilities and managing compliance.

- Security, strategy, and risk management
- Offensive security testing
- Compliance management
- Governance, risk, and compliance oversight

Zero trust services

Protect critical business data and applications in a security-rich infrastructure.

- Digital identity services
- Data and application protection
- Cloud security
- Zero trust security and secure access service edge (SASE)
- Infrastructure protection

Incident recovery services

Minimise the impact of disruption with capabilities to automatically recover critical business processes and data.

- Cyber incident recovery
- Managed backup services
- Hybrid platform recovery
- Data centre design and facilities
- Infrastructure Protection

Security operation centre and response services

Discover and respond to a detected security incident.

- Advanced threat detection
- Incident response and forensics

Features

- Assess and benchmark the maturity of your cybersecurity and resilience posture
- Protect your systems, data, and reputation with industry-leading security consultancy services
- Safeguard your enterprise with cybersecurity for on-premises, hybrid, and multi-cloud environments
- Get assistance with responding to regulatory audit requests
- Gain support for industry compliance requirements
- Discover and respond to security incidents
- Access a global network of cybersecurity experts

Benefits

- Gain visibility into significant threats and vulnerabilities
- Identify security risks resulting from audits, assessments, and reviews
- Prevent or reduce the likelihood of cyberattacks
- Supplement internal resource gaps with skills and resources to manage cybersecurity risks
- Ensure security compliance with industry regulations
- Identify high risks and existing capabilities
- Mitigate impact of disruption

Why Kyndryl?

We work side by side with our customers to design, build, manage, and modernise the vital technology systems that the world depends on every day. With more than 30 years of IT services experience, 90,000+ skilled practitioners worldwide, and strategic alliances with industry-leading partners, Kyndryl is uniquely positioned to innovate at scale while delivering exceptional outcomes for our customers.
