Service Name

B-SAFE Secure Data Transfer System

Service Description

B-SAFE Secure Data Transfer is a web-based system to upload, send and share any files and messages securely and rapidly, including large files and data sets. Secure, Auditable, Automated, and Compliant File, Email and Data Transfer and Sharing. Scalable, and secure with encryption as standard for OFFICIAL and OFFICIAL-SENSITIVE. To provide a user-friendly system compliant with the current Government (e.g. PSN, GDPR, 14 cloud security principles, etc.) and industry standards of accessibility, privacy, security and resilience (e.g. ISO27001, ISO9001, Cyber Essentials PLUS, etc.)

Basic modules

- Mailbox
- Files
- Folders
- Documents management
- Changelog
- Delivery log
- Correspondence templates
- System messages templates
- Users (staff and pupils, external contractors)
- Calendar/Diary
- Statistics and reports
- Databases (Data classification, etc.)

Features

- Secure data (file, email) delivery, no file size limit
- Uploading files, photos, videos, documents, policies, plans, etc.
- File sharing & collaboration, Virtual data rooms
- 256-bit AES encryption, full audit trail

B-SAFE

Service Definition Document

January 2026

- Integrated real-time identity assurance, limiting access to only vetted users
- Multi-factor authentication, single sign-on (AD, LDAP, SAML, ODBC, Local Accounts)
- Works on desktop, laptop, tablet, mobile phone devices
- An appropriate security structure to prevent data breaches
- Delivers alerts via SMS, App, Email, onscreen messaging
- Supports a high number of concurrent licence holders / users
- Shares files and folders quickly and securely
- Protects and controls sensitive information shared internally and externally
- Fully utilises available bandwidth, without impacting other network traffic
- Ensures only authorised recipients can access secured information
- Secures your data in transit, comply with secure data transfer
- Delivers data reliably with real-time reporting of transfer progress
- Provides rich APIs for application integration, integration with existing infrastructure
- Receives files from only registered users, users invitation for self-registration
- Sends/receives data in any file format, messages with attachments
- Sophisticated, easy to collate reports
- Executive-level performance snapshots with drill-down
- Uploading files, photos, videos, documents, policies, plans, etc.
- Templates of correspondence, system messages, etc.
- Automated correspondence, letters, emails, reports, text messages.
- An appropriate security structure to prevent data breaches
- Delivers alerts via SMS, App, Email, onscreen messaging
- Support a high number of concurrent licence holders / users
- Receiving information from different locations
- Works on desktop, laptop, tablet, mobile phone devices with and without software installation

B-SAFE

Service Definition Document

January 2026

- mobile and desktop applications are available (iOS, Android, Windows, Linux/Unix)
- Secure workflows and approval processes
- Flexible permissions and privilege settings
- Full Disaster Recovery, backups to restores
- Compliant with industry standards of accessibility, privacy, security and resilience
- Full audit trail: when, who, what and how changed
- Editable organisational structure without losing connections to previous organisational structures.
- Capabilities for secure and effective use by lots of participants.
- Attachment of documents, photos and video and communication between users
- Secure, consistent, accurate and timely bulk data feeds
- Single, reliable source of data
- Fully documented, extensible, standards-based architecture
- Documented records of data feeds to help with Data Protection and Freedom of Information compliance
- Effective summary analysis and reporting capability, effective export, import, print and search capability.

Benefits:

The system is hosted and managed by **Bondap** solution (SaaS). The system is browser-based, browser and operating system independent and does not require software installation on local machines.

The system has flexible permissions and privilege settings

The system has Full Disaster Recovery, Recovery Point Objective (RPO) **1 hour**, Recovery Time Objective (RTO) **4 hours**. Minimum support hours **8.00am – 17.00pm**, maximum - **24/7**.

B-SAFE

Service Definition Document

January 2026

The system is compliant with current Government (PSN) and industry standards of accessibility, privacy, security and resilience

The solution is hosted in a tier 3 or equivalent data centre, Compliant with the 14 Cloud Security Principles (<https://www.ncsc.gov.uk/guidance/implementing-cloud-security-principles>) and has a robust approach to ensuring a smooth service through the effective management of network traffic.

The system has lots of additional modules and extensions

Users

- Customers maintain full control over the administration and provisioning of user accounts within the service.
- Role-based access control can be utilised to define roles and permissions to evidence data and features of the service.
- The separation and access control within management interfaces is subjected to independent penetration testing.
- Customers can increase and decrease the number of users as required. There are no limitations on the number of users or concurrent users in the system.

Service Hours

Consultation, advice and guidance: basic support - 08:00-17:00, Monday to Friday, excluding public holidays or 24 hours a day, seven days a week.

Access to the system: 24 hours a day, seven days a week.

No planned downtime - seamless maintenance, including updates without a disruption to the service.

Level of Service

B-SAFE

Service Definition Document

January 2026

Uptime: standard SLA 99.9%; HA subscription SLA 99.99% . We regularly achieve 100% uptime evidenced by 3rd party service availability monitoring.

Service has no planned downtime: upgrades and updates are seamless. We use load balancer (for HA subscription - high availability multi-cloud). We provide component redundancy Full N+1 or Fault tolerant (2N or 2N+1) dependent on subscription level.

We utilise multiple resilience arrangements, including availability zones, which allow us to provide redundancy across physically separated locations, and regularly practice disaster recovery scenarios.

We have a robust Business Continuity (BC) & resilience framework, including a full disaster recovery plan, that addresses the full recovery process, from backups to restores with the following objectives:

Name	Target
Recovery point objective	1 hour
Recovery time objective	4 hours

Support SLA

On historical data (1 year) the average response time is less than 30 minutes, including investigation of the issue, defining nature and level (crucial, medium, low), not simple contact with the customer.

SLA proposed:

Priority	Response Target	Fix Target	Resolution Target
1	< 30 minutes	< 3 hours	75% Within target
2	< 60 minutes	< 6 hours	80% Within target
3	< 4 hours	< 17 hours	85% Within target
4	< 8.5 hours	< By agreement	95% Within target

Post-training and post-implementation support for service users for any queries relating to the system is an integral part of our service.

January 2026

We provide 4 types of support subscriptions:

1. Basic support:

- ❖ Standard maintenance (including bug-fixing, system upgrades, software updates, secure updates, etc.)
- ❖ Access to video-tutorials for users
- ❖ Access to all relevant documentation and User Manual in an electronic format.
- ❖ User support using ticket system or email support weekdays between 8am and 6pm.

2. Advanced support:

- ❖ All the Basic support +
- ❖ User support using phone weekdays between 8am and 6pm
- ❖ 2 online training session (3 hours each) for system users (up to 10 users) with “train the trainer scheme”, including but not limited to:
 - system configuration and settings;
 - user roles and rights;
 - system general functionality;
 - specific modules functionality;
 - user control (change log);
 - reporting capabilities, interactive charts;
 - template capabilities (messages and letters template change, etc.);
 - ticket system usage.
- ❖ *Optionally chat support can be added to the subscription (payable option).*

3. Around the clock ticket system and/or email support:

- ❖ All the Advanced support +
- ❖ 24/7 User support using ticket system or email support

4. Around the clock phone and chat support:

- ❖ All the Around the clock ticket system or email support +
- ❖ 24/7 User Support by phone and chat

B-SAFE

Service Definition Document

January 2026

Optionally to any support subscription can be added:

- **Onsite support**

It can be a training session or any other onsite support customer requires

- **Additional online training sessions**

After sales support/Software upgrades and patch management (including OS, DB and application):

- 1 major release a year;
- weekly updates;
- Critical updates not later than in one working day.

Onboarding

All clients receive direct support in on-boarding specific to their requirements. We provide onsite training, online training, user documentation and video tutorials. Training can be arranged as required, however our system is designed with intuitiveness and user-friendliness in mind, and formal training is rarely required. We also provide migration services and integration with other customer systems.

Ticket system access will be provided to the buyer within 1 day.

To discuss requirements or make initial enquiries contact contact@bondap.com

Request Process

1. Make initial contact to discuss requirements, via contact@bondap.com
2. Discussions could involve a meeting with a representative from the BONDAP.

Offboarding

Users can use built-in export features to extract data any time during the contract.

At the contract end/exit we place the encrypted archive with full Customer's data extraction on our secure private cloud. The data is transferred/exchanged via secure communication channels which are protected by best practice encryption.

Then the customer can download it using given credentials.

Once the customer confirms successful receiving of its data, we securely destruct all customer's data on all our servers.

Services included in the price at the end of the contract:

- Customers data export in sql and/or csv format as an encrypted archive and data fields and dependencies description.
- Placing archived data on our own private secure cloud.
- Sending credentials to the customer to download and extract the archive.
- Date of customer data destruction agreement.
- Customer data destruction.

Additional services can be provided by customer's request at the additional cost.

Additional requirements for delivery of the data in non-standard file formats or with transformations applied will be chargeable per the standard rate card.

Technical requirements

- Internet connection
- Modern Web browser: IE 11/Edge/Chrome/Firefox/Safari/Opera/Chromium-based browsers

Hosting options:

- Standard hosting
- Hosting with Private network / Public key authentication (including by TLS client certificate)

B-SAFE

Service Definition Document

January 2026

- High Availability hosting
- High Availability hosting with Private network / Public key authentication (including by TLS client certificate)

Hosting locations:

- United Kingdom
- European Economic Area (EEA)

Users can control hosting locations.

Security

Our Datacentres security standards comply with recognised standards, such as CSA CCM v3.0 or ISO27001.

We also hold a number of industry recognised certifications, such as ISO/IEC 27001, ISO/IEC 20001, CSA CCM v3.0, Cyber essentials plus, that cover our policies and processes in:

- Penetration testing
- Protection of data at rest
- Data sanitisation process
- Equipment disposal approach
- Information security policies and processes
- Configuration and change management
- Vulnerability management
- Protective monitoring
- Incident management
- Secure software development

We also imply 3-rd party penetration testing at least once a year with a CREST-approved service provider.
