## ABOUT AG CONSULTANCY & APPS LTD

### AG recognised for Quality & Innovation within the SAP ecosystem

- An excellent reputation with repeat clients & high organic growth

### SAP Gold Partners

- Winner of SAP Customer Success Awards, 2024
- HQ In: Slough (UK), Office In: Aberdeen (UK), Utrecht (NL) & India (offshore x2) with operational presence in the US and Middle East

### SAP Multi-Specialists

- Focus on GROW & RISE with deep ECC/S4 expertise from SI's & Industry
- Leading SAP Signavio & BTP Build Process Automation specialists
- Leading SAP EAM specialists

*Our Story shows Ambition, Success & Maturity*

# ISO STANDARDS AND COMPLIANCE

AG operates in accordance with its **MS01 Integrated Management System Manual**, applying both high-quality and robust working practices across all operations.

AG is fully **ISO 9001, ISO 14001, and ISO 45001 certified** by **BSI**, demonstrating our commitment to quality, environmental responsibility, and occupational health and safety.

Our Integrated Management System has been developed in alignment with the following international standards:

- ✓ **ISO 9001:2015** – Quality Management Systems
- ✓ **ISO 14001:2015** – Environmental Management Systems
- ✓ **ISO 45001:2018** – Occupational Health and Safety Management Systems
- ✓ **ISO/IEC 27001:2017** – Information Security Management Systems

In addition, AG adopts a range of other recognised standards to underpin key operational processes, including:

- ✓ **IS: SOC2 Type II certified**
- ✓ **Cyber Essential & Cyber Essential Plus certified**
- ✓ **BS 7858** – Security Screening of Individuals (Code of Practice)
- ✓ **ISO/IEC 27002:2017** – Security Techniques (Code of Practice for Information Security Controls)

# ENTERPRISE ASSET MANAGEMENT (EAM)

## SAP Plant Maintenance and EAM Services

**Focus:** SAP EAM | SAP SCM Suite | EAM Assessments | AG Products (Smart Ex, Skins, Reporting Suite) | Maintenance Excellence | Data Standards & Remediation

AG delivers a comprehensive suite of SAP PM and EAM services designed to optimise asset performance, strengthen maintenance processes, and enhance data quality.

Our approach combines deep technical expertise with proven industry practices, supported by our own accelerators and SAP-certified solutions.

*Key Services Include:*

### ✓ **Cloud Solutions:**

Implementation and support of the **SAP SCM Suite**, including **SAP Service and Asset Manager (SSAM)**, **Asset Performance Management (APM)**, **Field Service Management (FSM)**, **Business Network Asset Collaboration (BNAC)**, and **Resource Scheduling (RHS)** to drive connected, efficient asset operations.

### ✓ **EAM Assessments and Health Checks:**

Detailed analysis of client SAP PM/EAM environments, covering system configuration, processes, and data quality, resulting in a *Health Check Report*, improvement plan, and roadmap for optimisation.

### ✓ **AG Products:**

Deployment of AG's proprietary solutions -> **Smart Ex, Skins**, and the **Reporting Suite**, alongside specialist SAP products such as **Smart Inspections** and **EAM KPIs/Dashboards**, providing enhanced usability, analytics, and operational insight.

### ✓ **Maintenance Excellence:**

Alignment of SAP solutions, configuration, and data structures with global standards such as **ISO 14224** and **ISO 55001**.

### ✓ **Data Standards and Remediation:**

Establishing and enforcing master and transactional data standards, cleansing existing data, and embedding governance frameworks.

### ✓ **SAP Coaching and Enablement:**

Supporting sustainable solution adoption through focused coaching, **Train-the-Trainer (TTT)** programmes, and end-user training tailored to client operations.

# DIGITAL CORE

## Comprehensive SAP Services for Sustainable Business Transformation

We provide a full spectrum of SAP services designed to help organisations, such as Fertiglobe modernise their systems, enhance process efficiency, and maintain operational stability.

Our expertise spans implementation, migration, optimisation, and ongoing support across key SAP solutions and business functions.

*Our core focus areas include:*

### ✓ **SAP S/4HANA RISE & GROW:**

Delivering structured transformation programmes through RISE and GROW with SAP, enabling rapid and secure transition to S/4HANA Cloud with industry-aligned best practices.

### ✓ **S/4 Move:**

Supporting clients in their migration from ECC to S/4HANA through comprehensive assessments, planning, and execution using proven SAP methodologies.

### ✓ **SAP AMS (Application Management Services):**

Providing ongoing application management, issue resolution, and continuous improvement to ensure system reliability and performance.

### ✓ **SAP Upgrades:**

Executing technical and functional upgrades to maintain compliance, security, and alignment with SAP's latest innovations.

### ✓ **SAP Changes and Enhancements:**

Implementing configuration and functional updates such as new company codes, plants, or business entities, ensuring smooth transitions with minimal impact to operations.

### ✓ **Security, Authorisations, and GRC:**

Strengthening system integrity and compliance through effective security design, authorisation management, and GRC framework implementation.

### ✓ **SAP Ariba:**

Enabling efficient procurement operations through SAP Ariba deployment, integration, and process optimisation.

### ✓ **Mergers and Acquisitions (M&A):**

Managing carve-outs, integrations, and post-merger harmonisation across SAP landscapes to support business continuity and data consistency.

# INTELLIGENT TECHNOLOGIES

## Automations and Artificial Intelligence (AI)

AG is driving innovation across **SAP Process Discovery**, **Process Automation**, and **Artificial Intelligence (AI)** helping Fertigllobe modernise their operations, and realise measurable efficiency and cost improvements. Our focus is on combining automation, analytics, and intelligence within SAP environments to deliver tangible outcomes.

*Key Services Include:*

- ✓ **SAP Automation via Robotic Process Automation (RPA):**  
Implementation of intelligent automation using **SAP Build Process Automation** on **SAP Business Technology Platform (BTP)** and **UiPath RPA**. As one of the UK's leading SAP Automation specialists, AG helps clients automate routine SAP transactions, approvals, and data management tasks to increase productivity and reduce manual effort.
- ✓ **AI-Driven SAP Automation:**  
Integrating **AI capabilities** such as **SAP Joule**, **SAP AI Core**, and **AI Launchpad** to bring contextual intelligence into SAP processes, enabling predictive maintenance, intelligent document processing, demand forecasting, and anomaly detection. These solutions support data-driven decision-making and improve process reliability across the enterprise.

- ✓ **AG Out-of-the-Box SAP Automations:**  
A library of pre-built, proven SAP automations developed from real client projects and refined for rapid deployment. These cover key business areas such as *finance, procurement, and supply chain*, delivering accelerated time-to-value and standardised best practices.
- ✓ **SAP Process Discovery via Process Mining:**  
Using **SAP Signavio Process Insights** and **Process Intelligence** to analyse end-to-end processes, identify inefficiencies, and uncover quick wins with high impact and rapid ROI.
- ✓ **SAP Signavio Process Modelling:**  
Supporting clients in designing and optimising processes through **data-driven process modelling**, ensuring alignment between system design and strategic business objectives.
- ✓ **AI-Enhanced Continuous Improvement:**  
Applying advanced analytics and machine learning to monitor performance, detect deviations, and proactively recommend improvements to establish a culture of continuous optimisation within the SAP landscape.

# DELIVERY EXPERIENCE

## Optimised Delivery Model

Our delivery approach is tailored to match the client's specific needs, ensuring an **efficient and scalable resource** pool to maximum value throughout the engagement. AG can rapidly scale resources to meet evolving project demands, providing the right expertise at the right time to ensure consistent delivery quality.

## Extensive SAP Expertise & Deep Industry Knowledge

AG brings broad experience across a wide range of SAP services, supported by an exceptional team well-versed in SAP best practices and real-world pragmatism. Our team combines end-user insights and consulting expertise, with deep experience, enabling practical, impactful, and industry-relevant solutions.

## Functional Coverage

We provide comprehensive coverage across all SAP functional areas, with specialist knowledge in Finance, Procurement & Logistics, PM, Project Systems, HR, and Analytics.

## Flexible Engagement Models

Our engagement frameworks are highly adaptable, allowing us to tailor our approach to your project requirements and organisational preferences.

## Adaptive Billing Approaches

We offer flexible billing options (fixed cost, time & materials, hybrid model) designed to suit varying project scopes and financial models.

# AMS PROVEN METHODOLOGY

AG's **Application Management Services (AMS)** provide clients with reliable, end-to-end support for their SAP environments, ensuring system stability, performance, and continuous improvement.

Our AMS offering covers proactive monitoring, incident and problem management, enhancements, and technical optimisation across both on-premise and cloud SAP landscapes.

We provide a structured approach for service management aligned to **ITIL framework**. These practices ensure consistent service delivery, improved customer satisfaction, and operational efficiency.

## ITIL Key Processes

- ✓ **Incident Management** – restoring normal service promptly to minimise business impact
- ✓ **Service Request Management** – handling user requests efficiently
- ✓ **Change Management** – managing change in a controlled way to mitigate risk
- ✓ **Problem Management** – identify root causes of incidents to prevent recurrence and improve service quality

## Key Benefits

### ***Improved Service Delivery***

- Our standardized processes lead to consistent and reliable services.
- Clear service definitions and SLAs help manage expectations.

### ***Enhanced Customer Satisfaction***

- Focus on aligning services with business needs.
- Faster response and resolution times improving user experience.

### ***Increased Efficiency and Productivity***

- Streamlined workflows reduce duplication and waste.
- Automation and best practices improve operational performance.

### ***Better Risk Management***

- Structured change and incident management reducing service disruptions.
- Proactive problem management helping to prevent recurring issues.

### ***Cost Optimisation***

- Improved resource utilization and process efficiency lower operational costs.
- Avoidance of unnecessary work and rework saves time and money.

### ***Stronger Governance and Compliance***

- Clear documentation and accountability support audits and regulatory compliance.
- Alignment with ISO

### ***Continuous Improvement***

- Built-in feedback loops and performance metrics driving ongoing enhancements.

# G-Cloud 15 Service Definition – Lot 2a: Infrastructure Software as a Service (iSaaS)

# C-000-000-000 Systems Infrastructure Software

## SERVICE DEFINITION

### C-201-000-000

#### System and service management

AG Consultancy provides system and service management solutions that support the effective operation of SAP and enterprise cloud environments. Services include the implementation and configuration of IT Service Management (ITSM) and IT Operations Management (ITOM) capabilities, covering incident, problem, change, and release management in line with ITIL best practice. Solutions are aligned to SAP Cloud ALM, SAP Solution Manager, and integrated monitoring and automation tools to support proactive operations, configuration management, workload automation, and service visibility across hybrid and cloud-based SAP landscapes.

### C-202-000-000

#### Cloud Financial Management

AG Consultancy provides cloud financial management services aligned to FinOps and GreenOps principles to help organisations manage and optimise cloud expenditure. Services support cost visibility, allocation, budgeting, forecasting, and optimisation for SAP workloads running on cloud and hybrid platforms. Tooling and reporting integrate with SAP S/4HANA Finance, SAP Analytics Cloud, and cloud provider cost management services to enable financial governance, sustainability reporting, and informed decision-making.

# C-000-000-000 Systems Infrastructure Software

## SERVICE DEFINITION

### C-203-000-000 | Network

AG Consultancy provides network infrastructure software services that enable secure, resilient, and high-performing connectivity for SAP and enterprise systems. Services include software-defined networking (SDN), network performance monitoring, traffic optimisation, and network operations management. These services support SAP application availability, integration traffic, and secure connectivity across on-premise, cloud, and hybrid environments.

### C-204-000-000 | Security

AG Consultancy provides cloud security software services designed to protect SAP and enterprise environments throughout their lifecycle. Services include identity and access management (IAM), role-based access control, endpoint security, network security, security analytics, data protection, and governance, risk, and compliance (GRC) tooling. Capabilities align with SAP Identity Access Governance (IAG), SAP GRC, Single Sign-On (SSO), and security monitoring frameworks to ensure controlled, auditable, and compliant operations.

# C-000-000-000 Systems Infrastructure Software

## SERVICE DEFINITION

### C-205-000-000 | Storage

AG Consultancy provides storage management software services to support data protection, resilience, and performance for SAP and enterprise platforms. Services include backup and recovery, replication, archiving, migration, and software-defined storage solutions. These services support SAP HANA, SAP S/4HANA, and SAP BTP workloads, ensuring data availability, integrity, and compliance with retention and governance requirements.

### C-206-000-000 End Point Management

AG Consultancy provides endpoint management software services to manage and secure user devices accessing SAP and enterprise systems. Services include unified endpoint management (UEM), device configuration, lifecycle management, and IoT device management. These services support secure access to SAP applications across desktop, mobile, and specialised devices while maintaining compliance and operational control.

### C-207-000-000 Physical and virtual computing

AG Consultancy provides physical and virtual computing infrastructure software services that underpin SAP and enterprise cloud environments. Services include operating system environments, virtual machine management, container infrastructure software, cloud system software, and virtual desktop solutions. Capabilities align with SAP-certified cloud infrastructures, container platforms, and virtualisation technologies to support scalable, resilient, and performant application hosting.

# D-000-000-000 - Application Development and Deployment

## SERVICE DEFINITION

### D-201-000-000 | Integration and Orchestration

AG Consultancy provides comprehensive integration and orchestration services that enable seamless connectivity between SAP systems, cloud platforms, and third-party applications. Our expertise ensures end-to-end process automation, facilitating real-time data exchange and operational efficiency across complex IT landscapes. We implement integration frameworks leveraging SAP BTP, Integration Suite, CPI, and other industry-standard tools, enabling interoperability while minimising risk. Our solutions are designed with security, compliance, and scalability in mind, ensuring integrations remain performant and reliable under evolving environments.

### D-202-000-000

#### Application Platforms (Deployment-Centric)

AG Consultancy provides deployment-centric application platform services for enterprise systems. Services include platform design, configuration, implementation, integration, and operational support across SAP and other enterprise applications. Platforms are deployed to ensure high availability, system stability, and compliance with organisational and regulatory requirements. AG provides monitoring, patching, upgrade management, and operational support frameworks to maintain performance and reliability. Services are delivered throughout the platform lifecycle, including deployment, configuration updates, maintenance, and release management, to ensure consistent operation and alignment with enterprise IT landscapes.

# AG Value Proposition

## Extensive experience

Delivering SAP Support & projects for other Energy Sector clients, where we can share lessons learned.

## Highly Skilled

Our SAP practitioners who are experts in their field and will ensure successful delivery of services.

## Industry experts

We understand your business processes, challenges, and pain points, and will propose improvements wherever possible.

## Proven approach

With a structured methodology at its core, ensuring that all activities are planned, managed and delivered systematically.

# DELIVERY CAPABILITIES

AG provides comprehensive global delivery and support services through a well-established international presence. Our headquarters are located in the **United Kingdom**, supported by regional offices in the **Netherlands** and **India**, enabling us to deliver seamless coverage across time zones and client locations.

A **100% subsidiary is now established in the United Arab Emirates (UAE)** to further strengthen our regional footprint and provide **dedicated onsite and offshore support** to meet the specific operational and engagement needs of **Fertiglobe** and other clients in the Middle East.

Our global delivery model combines **local expertise** with **scalable offshore capacity**, ensuring flexibility, responsiveness, and cost efficiency.

This structure allows us to offer 24x7 support, rapid issue resolution, and access to specialised SAP consultants across functional and technical domains.

# SAP PARTNER CENTRE OF EXPERTISE

At AG Consultancy & Apps Ltd (AG), we are proud to have achieved **SAP Partner Centre of Expertise (PCOE)** authorisation - a recognition that directly benefits our clients by assuring the quality, reliability, and compliance of the SAP support services we deliver.

The PCOE audit, conducted under the **SAP PartnerEdge Programme**, is designed to ensure that partners meet SAP's highest global standards in three key areas: *people, processes, and infrastructure*.

By achieving this authorisation, AG has demonstrated that our support model, systems, and expertise meet SAP's stringent requirements, giving our clients full confidence that their SAP environments are in capable hands.

*What This Means for Our Clients:*

- ✓ **Certified Expertise:** Our SAP-certified professionals possess the skills, experience, and technical knowledge required to manage and support SAP landscapes effectively. Clients can trust that every issue is handled by qualified experts who understand both the technology and the business context.
- ✓ **Structured Support Processes:** Our well-defined and documented support processes, including onboarding, readiness, and issue management, ensure a consistent, transparent, and responsive experience for every client.
- ✓ **Reliable Infrastructure:** AG operates a fully functional support infrastructure aligned with SAP's best practices, ensuring stable operations, secure communication channels, and efficient service delivery.

The **PCOE authorisation** is more than just a compliance milestone. It is a testament to AG's commitment to continuous improvement, operational excellence, and customer success. It ensures that every support interaction adheres to SAP's global standards, translating into greater system stability, reduced risk, and higher performance for our clients.

# PROJECT DELIVERY FRAMEWORK

For SAP projects that AG undertakes we typically adopt our Project Delivery Framework which aligns with and incorporates PMI and PRINCE2 principles.

This framework provides a structured approach for the selection, initiation, planning and successful execution of projects, ensuring that value is delivered at each step of the journey, as shown in the diagram.

This framework also ensures that appropriate monitoring and controls are in place during project delivery, enabling the right interventions at the right time, in order to preserve quality standards.

Our project managers hold certification in project methodologies including PMI, PRINCE 2 and SAP Activate.

# Support Ticket Management – *Incidents/Service Requests*

**Key Activity:** Tailored  
process definition  
during Transition Phase  
for Fertiglabe

AG offer exceptional support services with well-established processes that are flexible enough to be adopted and tailored to each of our clients' needs.

# SUPPORT HOURS / SERVICE LEVEL AGREEMENTS

- Support hours: **09:00 to 17:00 hrs; Monday – Friday;**
- 24x7 coverage for P1 & P2, which can be further customised to meet business-critical requirements during peak operational periods.
- Each incident is **evaluated and assigned a priority level** based on its impact and urgency to ensure timely and effective resolution.
- **Service Levels** are outlined below.

| <b>Business Critical: - Priority 1</b>                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| An Occurrence of Event which: constitutes complete loss of Availability which prevents a large group of Users from working continuously; has a serious impact on the activities of the Client; causes substantial financial loss and/or disruption to the Client; or results in any material loss or corruption of Client's Data                                                            |
| <b>High: - Priority 2</b>                                                                                                                                                                                                                                                                                                                                                                   |
| An Occurrence of Event which has the possibility of: have a major (but not critical) adverse impact on the activities of the Client and no workaround acceptable to the Client is available; cause a significant financial loss and/or disruption to the Client which is more than trivial but less severe than the significant financial loss described in the definition of a Priority 1; |
| <b>Standard: - Priority 3</b>                                                                                                                                                                                                                                                                                                                                                               |
| An Occurrence of Event which has the potential to: have a major adverse impact on the activities of the Client which can be reduced to a moderate adverse impact due to the availability of a workaround acceptable solution to the Client; or have a reasonable adverse impact on the activities of the Client;                                                                            |
| <b>Low: - Priority 4</b>                                                                                                                                                                                                                                                                                                                                                                    |
| An Occurrence of Event which has the potential to have a minor adverse effect on Users.                                                                                                                                                                                                                                                                                                     |

| Priority                                                              | Activity          | Target Time           |
|-----------------------------------------------------------------------|-------------------|-----------------------|
| <b>1 – Business Critical</b><br><br>(Serious Impact – <b>URGENT</b> ) | Log Issue         | Immediate (automated) |
|                                                                       | Incident response | 30 Elapsed Minutes    |
|                                                                       | Resolution        | 4 Elapsed Hours       |

|                                                                       | Incident response | 30 Elapsed Minutes    |
|                                                                       | Resolution        | 1 Business Day        |
| <b>3 – Medium Priority</b><br><br>(Moderate impact – <b>MEDIUM</b> )  | Log Issue         | Immediate (automated) |
|                                                                       | Incident response | 1 Business Day        |
|                                                                       | Resolution        | 5 Business Days       |
| <b>4 – Low Priority</b><br><br>(Low Impact – <b>LOW</b> )             | Log Issue         | Immediate (automated) |
|                                                                       | Incident response | 1 Business Day        |
|                                                                       | Resolution        | 20 Business Days      |

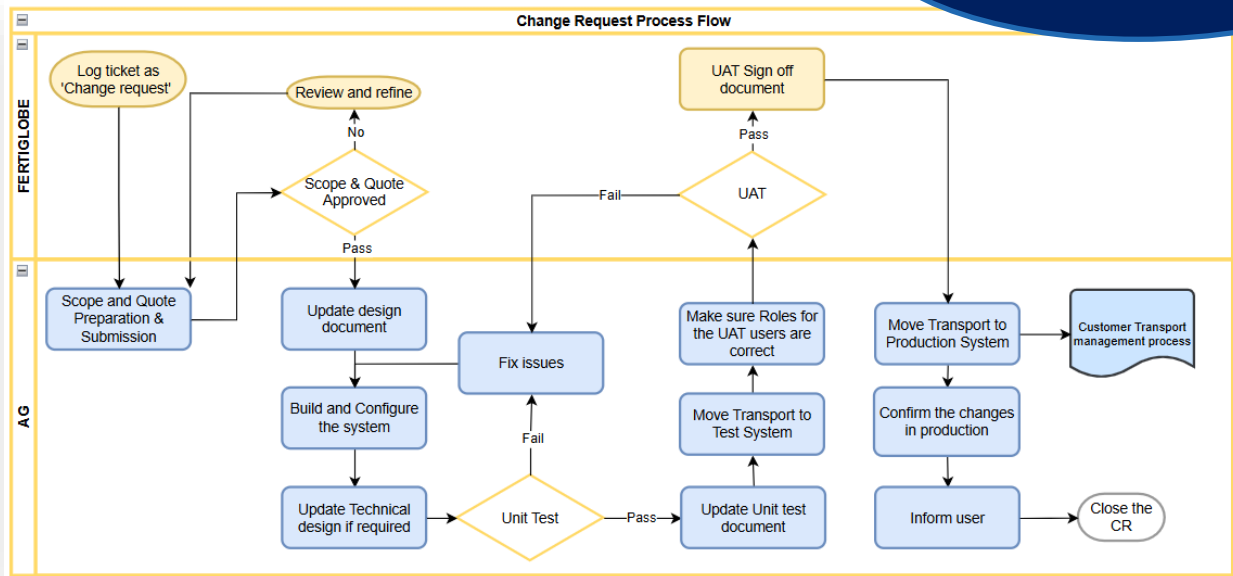

## SLA Activity definitions:

- **Log Issue** – incident logged with helpdesk and in ticketing system
- **Call back to Client** – call to discuss issue and provide initial feedback (initial Response)
- **Fix problem or workaround** – restore to operational state through resolution or workaround

# Support Ticket Management – *Change Requests*

AG offer exceptional support services with well-established processes that are flexible enough to be adopted and tailored to each of our clients' needs.

**Key Activity:** Tailored process definition during Transition Phase for Fertigllobe

# DRIVING INNOVATION IN SAP SERVICE DELIVERY

At AG, innovation lies at the heart of our SAP service delivery philosophy. We go beyond implementation and support, focusing on how intelligent automation and AI can transform business operations, enhance user experience, and maximise the value of SAP investments.

While SAP provides a powerful foundation with its embedded automation capabilities, including intelligent process automation, workflow orchestration, and pre-configured intelligent scenarios, AG takes a proactive, collaborative approach to bring these capabilities to life.

Working closely with Fertigllobe's stakeholders, we identify, design, and deliver industry-specific automation use cases in a structured, phased manner that aligns with the organisation's strategic goals.

## Our Innovation-Driven Approach

- **Process Analysis and Benchmarking**  
We begin by analysing existing business processes and benchmarking them against SAP Best Practices to identify where automation can deliver measurable efficiency gains or improve user experience.
- **Use Case Documentation and Prioritisation**  
Identified automation opportunities are documented, evaluated, and prioritised within the project's product backlog, ensuring that innovation is managed systematically and transparently.
- **Feasibility and Value Assessment**  
Each use case is rigorously assessed for technical feasibility, business value, and complexity to ensure that effort and impact are optimally balanced.

## Strategic Alignment and Phased Delivery

Automation delivery will be aligned with Fertigllobe's ongoing strategic initiatives to ensure that innovation complements, rather than disrupts, broader transformation objectives.

## Continuous Improvement through Change Management

Approved automation use cases are delivered as part of Support and Ongoing Operations through a structured Change Request (CR) process. This framework covers design, development, testing (including automation test execution), user acceptance, and deployment. By embedding automation within the standard change management lifecycle, AG ensures that process optimisation remains an integral part of Fertigllobe's continuous improvement journey.

## Artificial Intelligence: Joule (SAP's Copilot)

AG also embraces the power of artificial intelligence to redefine how SAP systems are supported and enhanced. Joule, SAP's embedded AI copilot, available across SAP Public Cloud and SuccessFactors.

AG actively integrates Joule into its service delivery framework, particularly for consultants, to accelerate issue resolution, reduce debugging time, and enhance analytical capabilities. This adoption of AI-driven support ensures that clients benefit from faster response times, predictive insights, and more intuitive system interactions.

# GOVERNANCE FORUMS

## INCIDENT & PROBLEM MANAGEMENT

- Ensure SLAs are met (response and resolution)
- Triage ticket to appropriate AG Support consultant
- Track progress of tickets to resolution including adherence to SLAs
