

G-Cloud 15 Service Definition Document

Low Code – Asset Management Implementation

1. Scope

Red Kite provides low-code asset management implementation and cloud support services to help organisations design, configure, and optimise cloud-based asset lifecycle solutions. The service enables rapid digitisation of asset registers, workflows, approvals, integrations, and reporting, improving visibility, governance, and operational efficiency while reducing reliance on manual processes and legacy systems. These solutions are based on the leading Low Code Platforms that include Kissflow and Pega. Red Kite has created pre-built components that form an Asset Management solution that is an accelerator, allowing extremely rapid delivery of a solution. The solution supports:

- Asset managers and operational teams
- Facilities and estates teams
- IT and digital transformation teams
- Finance and compliance stakeholders
- Service managers and administrators

The service covers the full asset lifecycle, including asset onboarding, maintenance, inspection, compliance, disposal, and reporting. Solutions can be integrated with existing enterprise systems such as finance, procurement, document management, and identity services. Red Kite provides implementation, configuration, testing, training, and ongoing optimisation support.

2. Approach

- **Discovery & Strategy:** We begin with a structured discovery to understand asset types, lifecycle stages, regulatory obligations, existing systems, and pain points. This ensures the solution aligns with operational, compliance, and governance objectives.
- **Solution & Data Model Design:** We design a scalable low-code solution architecture, defining asset data models, hierarchies, relationships, and metadata to support full lifecycle tracking and reporting.
- **Workflow & Process Configuration:** Asset processes such as onboarding, inventory, maintenance, inspections, approvals, exceptions, transfer, and disposal are configured using low-code workflows, rules, and SLAs to standardise operations.
- **Integration & Migration:** We integrate the solution with existing enterprise systems (finance, procurement, identity, document management) and migrate data from spreadsheets or legacy tools with validation and cleansing.
- **Testing, Enablement & Optimisation:** We conduct functional, security, and user acceptance testing, followed by hands-on training and knowledge transfer. Post go-live, we optimise workflows and reporting based on real-world usage and feedback.

3. Expected Outcomes

- The delivery of Asset management solution that supports the exact needs of the customer requirements
- Fully integrated with other enterprise systems
- Data migration from spreadsheets and legacy systems
- Role-based access and governance configured
- Reporting, dashboards, and analytics that provide essential information
- Trained and adopted users

4. Pricing

The Low Code – Asset Management Implementation service can either be purchased on a Fixed Price basis on a daily rate as specified in the SFIA Rate Card. The accelerator components are provided free of charge part of the engagement.
