

Take the stress out of AP with the magic eye of our Intelligent Recognition Invoice Service

Leveraging the power of our Agilyx Integration Machine (AIM), a powerful integration and processing platform built on Microsoft Azure services, IRIS utilises the power of Azure's Artificial Intelligence (AI) functionality to scan PDF invoices received via email and electronically imports them into Unit4 ERP.

Supplier emails invoices to your AP team, or your AP team scans paper invoices to email using your in-office scanner/copier.

Emails with invoice PDF attachments are forwarded by your AP team to your dedicated IRIS email processing inbox.

IRIS examines the PDF attachment using AI to read and identify all relevant invoice details. If the invoice fails to be read with sufficient confidence, it is sent back to your AP team for manual processing.

IRIS constructs an e-invoice containing all the relevant invoice details and sends to Unit4 ERP.

Without any manual intervention, Unit4 ERP processes the e-invoice with the original PDF attached and the normal AP approval workflow commences, typically with minimal additional data entry. Any missing critical fields, such as PO Numbers are able to be dealt with by your AP team online during this workflow.

Seamlessly integrated

Connect your existing financial system to IRIS, utilising the power of Azure you can convert PDF invoices to automatically processed e-invoices with no human interaction needed. IRIS seamlessly integrates with Unit4 ERP and other ERP's for a smooth deployment and seamless user experience.

Data accuracy

Reduce business interruption, risk of incorrect data entered and reduce the manual handling that comes with the processing of AP invoices, with an intuitive solution that integrates with your ERP, you save time and build data confidence.

Reduce processing time

A trustworthy, automated solution means less time and money spent on manually entering invoices, allowing you to simplify your processes and enable your team to focus on higher value tasks.

Magic Eye Scanning

IRIS utilises AI to run a magic eye over your invoices and ensure they are scanned into your ERP system with all the key data, reducing errors and costly manual processing time.
