G-Cloud 15: Metadvice Pricing Document

Pricing structure

Metadvice is provided as a Software-as-a-Service (SaaS) offering. The annual licence fee includes access to the service, training materials, support, maintenance, and updates for the duration of the licence term.

The total cost is determined by the licensed population size, the modules selected, and the licence duration as set out in the Call-Off Contract. Additional modules can be added at any time, and additional fees will be calculated pro-rata. Additional training or implementation support may be added at the Buyer's request.

1. **Licence Term** will be determined by the Call-Off Contract, with a minimum term of 12 months. Licence fees are payable in advance and are non-refundable once the service period has commenced.
2. **Core modules** (included in the base licence): The Core licence provides population health analytics and guideline-aligned clinical decision support for the following long-term conditions:
    - Primary CVD Prevention - lipid optimisation
    - Secondary CVD Prevention - lipid optimisation
    - Hypertension
    - Type 2 diabetes
    - Chronic kidney disease
    - Atrial fibrillation
3. **Additional modules** (optional add-ons): Additional modules extend the Core licence and are only available where the Core modules are licensed.
    - Identification of patients with evidence suggestive of uncoded or unrecorded long term conditions, including chronic kidney disease, hypertension, type 2 diabetes, heart failure, secondary CVD prevention.
    - Precision guideline support for patients with co-existing chronic kidney disease and type 2 diabetes
4. **Advanced modules** (optional): Priced separately due to additional computational and analytical requirements**.** May be licensed alone, or in combination with Core and Additional modules.
    - Heart failure risk prediction and case-finding
5. **Population coverage** is calculated using the NHS Practice List Size (PLS) for each practice included in the Licence Agreement, as published by the NHS Business Services Authority at the point of contract award.
6. **Additional training** or **implementation support** may be conducted online or in-person, charged at a daily rate plus reasonable travel expenses if conducted on-site.

Metadvice Pricing Document: G-Cloud 15

Annual licence costs

Licence Type	Scope	Cost per registered patient, per year
Core licence	All core modules listed above	£0.30
Additional module	Uncoded or unrecorded condition identification	£0.15
Additional module	Precision support for CKD and T2D	£0.15
Advanced module	Heart failure risk prediction and case-finding	£0.65

Additional training and implementation support costs

Type	Cost per half-day	Cost per day
Additional training	£400	£800
Additional implementation support	£550	£1,100

All costs are exclusive of VAT, and valid for the duration of this G-Cloud 15 framework.

Fluctuations and mergers

Recognising that the registered patient numbers may fluctuate slightly through the term of the Call-Off Contract, licence population counts will be reviewed no more than once per contract year.

In the event of GP practices merging mid term, and therefore significantly increasing the registered patient number, we will use the combined number of both practices, with any resultant increase calculated pro-rata to ensure fairness and transparency.

Metadvice provides clinical decision support and population health analytics.
Final clinical decisions remain the responsibility of the clinician.
