GatewayConnect

Our Data + Your Tools = Insights at Scale

OUR APPROACH

For most organizations, data ingestion, transfer, and storage is cumbersome and expensive. That's why we built GatewayConnect (GC), a revolutionary solution hosted by *Snowflake* that removes the barriers—while leaving all the benefits—of working with high-volume datasets.

BEST FOR DATA, ENGINEERING, AND ADVANCED ANALYSIS TEAMS

running large-scale queries or integrating A6 data into their tools or products.

All of the Access. None of the Infrastructure.

Create everything you need and more—in a fraction of the time

HOW IT WORKS

GatewayConnect + Snowflake is similar to an API, but far more robust, eliminating the need for API connections and documentation.

PLUG IN YOUR FAVORITE TOOLS

Or build your own access tools over top of the data.

OWN VS LEASE

GatewayConnect offers leasing options that give you access to directly sourced data—without the cost of building, storing, maintaining, and monitoring your own data warehouse.

	“OWN” A6 DataDirect	“LEASE*” A6 GatewayConnect
Data Cost	Roughly Equivalent	
Ingestion	You are responsible	You are covered
Storage		
Engineers		
Processing	Based on task and scale	

* All fees to Anomaly Six and Snowflake Computing are paid separately, in advance, according to available timing and payment options. Additional Snowflake accounts are available and invoiced separately.
