

Transform Movement Data Into a Decisive Advantage

Anomaly Six delivers **high-integrity, multi-domain geolocation data** and **advanced analytical tools** that reveal routes, patterns, and behaviours at global scale—supported by legally sourced, privacy-aligned datasets you can trust in any mission environment.

Core Capabilities

HIGH-PRECISION DEVICE-MOVEMENT INTELLIGENCE

Global and historical visibility of device routes, patterns, networks, and behaviours—even in disconnected, degraded, or denied environments.

HIGH-SPEED DATA PROCESSING & ENRICHMENT

Billions of data points processed per minute for immediate use, enabling fast pattern recognition and multi-year reconstruction.

PURPOSE-BUILT, CROSS-FUNCTIONAL APPLICATIONS

Intuitive interfaces that expose movement patterns, anomalies, and hidden associations—usable across teams without specialised skills.

INTEROPERABLE ARCHITECTURE

Open, modular platform that informs and enhances existing ISR, geospatial, and intelligence systems, supporting seamless adoption across Five Eyes partners.

MISSION-READY OPERATIONAL SUPPORT

Project-based access to A6 SMEs for targeted analysis, red-team assessments, and operational planning across Australian federal/state agencies and allied defence partners.

Use Cases

MARITIME AND AVIATION DOMAIN AWARENESS

Track aircraft or vessel patterns and grey-zone activity to counter illicit activity and Indo-Pacific threats.

SMUGGLING & TRAFFICKING DETECTION

Reveal trafficking corridors and behavioural patterns across land, sea, and air.

INFRASTRUCTURE & ASSET SECURITY

Detect surveillance, loitering, spoofed devices, and anomalous patterns around critical sites.

JOINT ISR INTEGRATION

Fuse device-movement intelligence with SIGINT/GEOINT for stronger Five Eyes/AUKUS ISR operations.

The Domains

LAND

Border movement, ground logistics, smuggling vectors, ground-force surveillance.

AIR

Flight patterns, transport cycles, aircrew routines, refuel/mission support indicators.

SEA

Maritime loitering, anchorage behaviour, ship-to-shore activity, clandestine coastal movement.

CYBER

Insider threat and connectivity patterns tied to locations and entity identification.

The Data

7.3+ trillion total IP addresses

1 billion alternative identifiers

9 trillion records for time, place, and device

44 billion location events

2 years of rolling history

The Difference

- **Legally Sourced, Compliant Data**
Collected under strict global privacy and legal frameworks, with options for local control.
- **High-Integrity Signals You Can Trust**
Spoofing scrubbed, anomalies filtered, and device behaviour validated for trusted operational insight.
- **Scalable Analysis on a Unified Platform**
Multi-source movement, identifier, and pattern analysis—usable from tactical to enterprise levels.
- **Proven Impact Across Defence & Government**
Supporting Australian, U.S., and allied agencies across border, maritime, and Indo-Pacific missions.

A6 Tools + Support | Configured to Your Environment

EXPLORE

VisualizationEngine

Browser-based spatial analysis and visualisation

INTERROGATE

QueryBuilder

No-code queries at scale for rapid, repeatable outputs

INTEGRATE

GatewayConnect

Seamless integration of A6 data into existing infrastructure

FEED

DataDirect

High-volume data feeds with ownership and control

SUPPORT

OperationalSupport

Mission-ready SME support from start to finish
