

dbRotas

Rostering Software Solution

Algorithm driven personalised rota creation

Creating optimised and personalised rotas for both clinicians and departments

**Achieve 99.9%
leave request
incorporation**

**60% reduction in
locum spend within
a department***

*compared with rolling pattern rostering

- Personalised compliant rotas
- Automated allocation over changeover
- Organise staff into teams based on skill-set
- Set minimum and maximum staffing levels
- Cumulative staffing across multiple rotas
- Increase staff availability for training sessions

Live rotas

Leave and absence management

- Realtime compliance check
- Comprehensive audit trail
- Automated notification for leave approvals and shift changes
- Automated creation of locum shifts triggered by staff absences
- Convenient access to view leave entitlements
- Customisable user interface

Location based rostering

- Allocate locations based on training modules
- Automatic assignment based on individual job plans
- Log of sessions completed for fairer distribution of staff
- Automated notification for leave approvals and shift changes, even last-minute ones!
- Prevents staff from being allocated to multiple locations simultaneously
- Link staff across rotas together in teams

Job planning

- Create personalised job plans
- Customise job locations at departmental level
- Implement a trust-specific approval process
- Send review reminders to both clinicians and departments

Customisable statistics

- Departmental and trust-wide statistics
- Creation of location and utilisation summaries
- Detailed reports on leave and absences
- Forecast workforce need
