

Autodesk Docs – Unified Platform

Autodesk Docs is a cloud-based common data environment that provides document management and control to the entire project team. With Autodesk Docs, AEC teams can simplify collaboration and data management across design to construction and streamline document review and approval workflows.

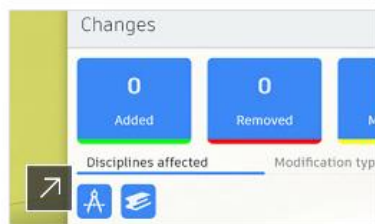

AUTODESK DOCS

Construction document management software

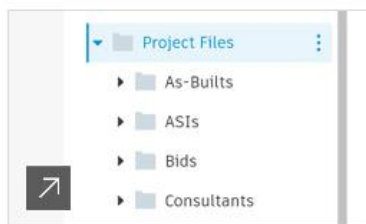

- ✓ Share, view, mark up and manage your construction drawings, documents and models
- ✓ Get anytime, anywhere access to project information in one place
- ✓ Reduce errors, make more confident decisions and improve project outcomes

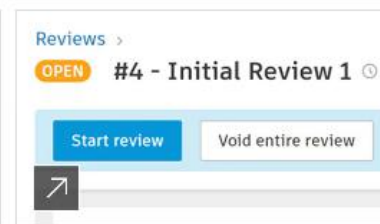

Autodesk Docs features

Design-to-construction connection
Connect teams on the Autodesk Construction Cloud platform, allowing easy transfer of information from design to construction.

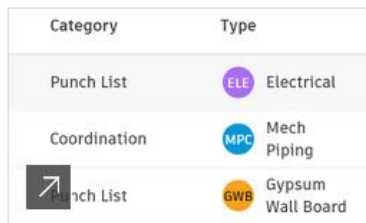

Document control
Get the right information into the right hands with structured folders and robust permission tools.

Document approvals
Reduce manual efforts and automate the review of drawings, models and documents before publishing and sharing.

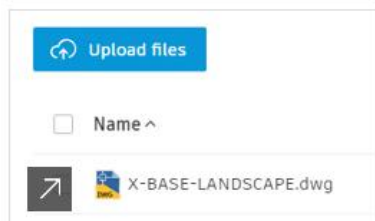

Full set of markup tools
Communicate and collaborate with project teams using a full set of markup tools.

Centralised issue tracking
Increase accountability and track and resolve issues from a single Centralised list.

Transmittal creation and tracking
Easily create and share transmittals with project teams and track with a full audit trail.

Desktop Connector
Open, save, move, rename and delete files directly from your desktop with Desktop Connector.

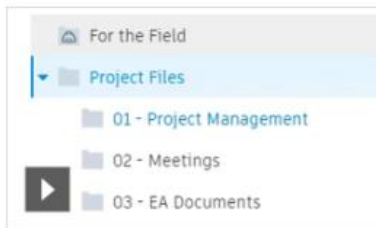

Integrated with AutoCAD and Revit
Integrations with Autodesk tools such as AutoCAD and Revit help streamline workflows and reduce duplication.

2D and 3D support
Seamlessly upload and view 2D drawings and 3D models, so teams have the right information.

Workflows and use cases

Document management

Store, review and share project documentation with customised folder structures, version control, file compare, mark-ups, issues and more.

Docs for architects and building engineers

Connect building design workflows in the cloud for teams using Revit, AutoCAD, FormIt and other tools in the Architecture, Engineering & Construction Collection.

▶ (video: 2:37 mins)

Docs for civil engineers

Power simplified paperless collaboration for civil engineers with digital mark-ups and issues, audit trails, internal and external sharing, and more.

Configure and standardize ISO 19650 project naming conventions on a connected document management solution.

Standards like ISO 19650 define the collaborative processes for managing information over the project lifecycle. Without a standardized document control process, teams waste countless hours looking for the most up to date information. Ensuring consistent document control is key to meeting project requirements and avoiding rework. With workflows that support the ISO 19650 standard in the Autodesk Construction Cloud platform, teams can efficiently configure, organize, and distribute documents across the project lifecycle.
