

Secarma Certified

Designed by experts to validate people, businesses and applications where existing certifications fall short.

What is Secarma Certified?

Secarma Certified is a cyber security accreditation framework developed to recognise and validate the expertise of professionals, the resilience of businesses and the security of applications. It has been created to fill the gap where current industry certifications don't fully meet the practical needs of real organisations.

Focused on actionable standards and real-world assurance, Secarma Certified strengthens trust across supply chains, reinforces your commitment to security and helps you stand out in a crowded market.

The Secarma Certified Offering

Individual Certification

Recognises practitioners who demonstrate proven cyber security knowledge and hands-on capability, including specialist credentials like Cyber Essentials Implementer.

Business Accreditation

Certifies organisations that meet clearly defined, practical security criteria. Designed to reflect real-world operational maturity, this helps reassure clients, partners and stakeholders.

Application Security Certification

Evaluates applications against industry best practices and OWASP testing criteria, certifying that they meet a trusted baseline for secure design and implementation.
