

Cybersecurity Scorecard

Measure resilience. Identify gaps. Build confidence.

What is a Cybersecurity Scorecard?

Secarma's Cybersecurity Scorecard is a consultant-reviewed self-assessment that helps organisations understand their current cyber resilience without the time or commitment of a full consultancy engagement.

It provides a structured view of how well your organisation manages risk, configures systems securely, detects threats, and responds to incidents. By combining your responses with expert review and scoring, the Scorecard delivers a clear, honest reflection of your current posture and where to focus next.

The Cybersecurity Scorecard is ideal for organisations that want a clear baseline view of their cyber resilience before committing to deeper assessments, testing, or certification.

Why use a Cybersecurity Scorecard?

Many organisations know they need to improve their cybersecurity but aren't sure where to start - or assume they've covered the basics when important gaps remain.

The Cybersecurity Scorecard provides clarity without complexity. It helps you understand your current position, prioritise improvement, and build confidence in your next steps without jumping straight into a full assessment or certification programme.

For organisations that need deeper, evidence-based insight, the Scorecard can also act as a stepping stone into a full [Cyber Security Maturity Assessment](#).

Risk Management

How cyber risks are identified, owned, and managed across the organisation, including governance, policies, and accountability.

Secure Configuration

How systems and services are configured to reduce exposure, covering access control, patching, and baseline security controls.

Monitoring and Detection

How effectively threats and incidents can be identified through logging, monitoring, and alerting capabilities.

Incident Response

How prepared the organisation is to respond to and recover from incidents, including escalation, containment, and recovery planning.

What the Scorecard gives you

A clear view of your current cyber resilience

Understand where your security controls are working well and where gaps exist, without the overhead of a full assessment.

Confidence in your next steps

Receive prioritised recommendations that help you decide what to improve first and where to invest.

Consultant-verified insight

Your results are reviewed by a Secarma consultant, giving reassurance that the findings reflect real-world risk.

A foundation for future improvement

Use the Scorecard as a baseline for future assessments, testing, or certification as your organisation grows.

How Secarma Delivers Value

Expert Review, Not Just a Questionnaire

Your responses are reviewed by a Secarma consultant, ensuring results reflect real-world security practices, not just tick-box answers.

Clear, Accessible Reporting

You'll receive a concise report with clear scoring, plain-English commentary, and prioritised recommendations that support decision-making at all levels.

A Practical Starting Point

The Scorecard provides a strong baseline view of cyber resilience and can be used to inform future assessments, testing, or certification activity.
