We help organisations and brands undertake digital transformations through: Generative AI & Automation, Application Modernisation and Development, Data Integration, Customer Experience, Composable eCommerce, and providing Insights from Analytics using modern Cloud technology.

Through partnerships with leading technology solution suppliers and Open-Source, we deliver transformational experiences across many types of businesses.

Kubernetes (Google Kubernetes Engine): Service Overview

DeeperThanBlue provides a complete, DevOps-driven Kubernetes service for Google Kubernetes Engine (GKE), designed to help UK public sector organisations adopt secure, scalable, and automated container platforms on the Google Cloud.

As both a Kubernetes Certified Service Provider (KCSP) and Google Cloud Partner, we deliver GKE solutions aligned to Google best practices and UK government cloud principles.

We support the entire Kubernetes lifecycle, from strategy, architecture, and compliance-aligned Landing Zones to cluster deployment, GitOps automation, policy enforcement, and 24×7 managed services delivered by Certified Kubernetes Administrators (CKA).

Our approach accelerates modernisation efforts, improves platform resilience, and ensures predictable, secure operations for mission-critical workloads running on GKE.

Kubernetes (Google Kubernetes Engine): Service Features

- **GKE Readiness & Strategy:** Comprehensive assessment including business case, benefits, and TCO analysis.
- **Modern Infrastructure:** Repeatable deployment of GKE using Infrastructure as Code (IaC) assets using Terraform, Helm, Secrets management and pipelines.
- **Governance & Compliance:** Designs aligned with GDS Service Standards, NCSC security principles, and CDDO guidelines.
- **Advanced Networking:** Granular traffic management and observability.
- **DevSecOps Integration:** Automated CI/CD pipelines for consistent application delivery across hybrid/multi-cloud environments with “shift-left” approach to security and testing.
- **Legacy Modernisation:** Accelerated migration of legacy workloads using Migrate for GKE.

Kubernetes (Google Kubernetes Engine): Service Benefits

- **Reduced TCO:** Optimise containerisation costs by 30-50% through dynamic resource allocation and spot instance technology.
 - **Zero-Downtime Operations:** High-availability architectures and automated rollback functionality to ensure service resilience.
 - **High Availability:** Enhanced fault tolerance and resilience through global service distribution.
 - **Expert Delivery:** Implemented by Google-certified architects and engineers
 - **Technical Debt Reduction:** Systematic modernisation of legacy applications to increase development lifecycle efficiency.
 - **Knowledge Transfer:** We upskill and mentor your internal teams through hands-on coaching and collaborative development to ensure long-term self-sufficiency.
 - **Flexible Support Tiers:** Access to different support levels, including 24/7/365 telephone support and service desk portal with rapid response times for critical incidents.
-

Service Delivery & Implementation

Stage 1: Discovery & Assessment

This initial stage focuses on Cloud Readiness and business alignment. It involves a "Readiness Review" to assess maturity and a "Discovery" phase to define user journeys, KPIs, and potential constraints

The goal is to gather essential insights to underpin innovation and understand the client's business goals

Stage 2: Strategy & Design

In this stage, the team defines overall technology blueprints and Solution Architectures. Key activities include:

- Implementation Workshops: Collaborating to agree on roles, responsibilities (RACI analysis), and project scope
- Landing Zone Design: Establishing secure cloud foundations with embedded security guardrails,.

Stage 3: Development & Execution

Following an Agile Development approach, the solution is built through iterative cycles or sprints. This phase often utilises:

- Infrastructure as Code (IaC): Automated provisioning using tools like Terraform and Ansible to ensure consistency and secrets management with tools like Vault by Hashi Corp and Microsoft's Azure Key Vault
 - Co-execution: Working side-by-side with stakeholders to deliver benefits early and iterate based on feedback
-

Service Delivery & Implementation (continued)

Stage 4: Validation & Onboarding

Before full deployment, the solution undergoes rigorous testing and environment setup

- Proof of Concept (PoC): Validating ideas and architectural patterns before full funding or the "go-ahead"
- Environment Setup: Configuring build/deployment systems and sandbox test environments for a seamless transition

Stage 5: Adoption & Enablement

A critical part of the methodology is fostering Sustainable Capability within the client's team

- Training & Mentoring: Upskilling staff through technical programs, paired programming, and "train-the-trainer" sessions to bridge the digital divide
- Knowledge Transfer: Ensuring client teams are equipped to maintain and evolve solutions through a comprehensive Wiki knowledge base and peer collaboration

Stage 6: Optimisation & Support

The final stage moves beyond deployment to ensure long-term value and reliability

- Proactive Monitoring: Utilising tools like Prometheus and Grafana for real-time health and performance tracking
 - Service Improvement: Continuous performance monitoring and "Meet the Experts" sessions to drive ongoing optimisation and service maturity
-

Testing and QA

We collaborate closely with our clients to test the solution, ensuring that performance and automation meet the expectations outlined in the project design. Throughout the deployment process, testing and approval are integral steps, with input from both the client and engineering teams to uphold the highest standards of delivery. This encompasses thorough performance testing, seamless continuous integration, and smooth delivery into production environments at scale. Our comprehensive QA services encompass a range of activities:

- Peer reviews for each deployment
 - Manual exploratory and cross-browser testing
 - Functional testing based on user story acceptance criteria
 - Regression testing
 - Test Automation
 - Google Lighthouse audits for performance, SEO, and best practices compliance
 - Load and scale testing
 - Monitoring server performance
 - Performance testing using JMeter and Grafana
-

Support and Managed Services

DeeperThanBlue provides flexible, enterprise-grade Support and Managed Services with defined service levels tailored to customer needs. Support is available across Standard and Premium tiers, with coverage options ranging from business hours to full 24×7 service.

DTB Service Level Agreements

Role	Business Hours	Extended Business Hours	24 x 5 days	24 x 7 days
Hours	09:00 – 17:00	08:00 – 22:00	00:00 – 23:59	00:00 – 23:59
Days	Monday to Friday ¹	Monday to Friday ¹	Monday to Friday ²	Monday to Sunday ²
Service Level	Standard	Standard	Premium	Premium

¹ Excluding Public Holidays

² Including Public Holidays, except Christmas Day

Severity	Description	Premium Service Level	Standard Service Level
Level 1	Production system down and unavailable	Response within 1 hour	Response within 2 hours
Level 2	Production system error but available	Response within 2 hours	Response within 4 hours
Level 3	Non-critical production / non-production system issue	Response within 4 hours	Response within 16 hours
Level 4	General enquiry / query	Response within 24 hours	Response within 24 hours

Training and Mentoring

DeeperThanBlue's training and mentoring approach centres on building integrated teams and enabling a truly hands-on learning journey for users and client stakeholders. We create an immersive environment that blends peer collaboration, structured training sessions, and informal knowledge-sharing opportunities to ensure learning is continuous, practical, and relevant.

Our core objective is to transfer our expertise in technology, process innovation, and best-practice delivery into our clients' internal teams. Through tailored training programmes, our specialists work side by side with client personnel to build long-term capability and confidence.

In addition to formal training, we provide ongoing mentoring to support the growth and development of individuals and teams. This includes one-to-one coaching, role-specific guidance, and support in adopting new tools, methodologies, and ways of working. Our mentoring approach focuses on nurturing future leaders, strengthening technical and delivery skills, and embedding sustainable, adaptable practices within the organisation.

By combining structured training with continuous mentoring, DeeperThanBlue ensures that client teams are fully equipped to maintain, optimise, and evolve their solutions long after project completion.

Social Value

- DeeperThanBlue will embed the UK Government's Social Value Model into all cloud software and cloud support engagements, using secure, scalable platforms (AWS, Azure, GCP - Google Cloud and IBM Cloud) to help public bodies deliver more reliable digital services for citizens, including vulnerable users, while improving long-term value for money.
 - We will prioritise energy-efficient cloud architectures and, where buyers permit, the use of low-carbon or carbon-neutral data centre regions, designing right-sized, auto-scaling solutions that reduce unnecessary compute and storage consumption and support the Government's net zero and climate resilience objectives.
 - Through our cloud support services, we will strengthen local supply chains by collaborating with UK-based SMEs for specialist components (such as accessibility testing, training, or niche integrations), helping to retain more economic value in the regions we serve while improving the diversity and resilience of public sector digital delivery ecosystems.
