

Go Deep and Lockdown Cyber Security are creators of specialist Cyber Security, Data Protection and AI Video Training Programmes. These are resilient services, built to Security by design principles and are multi hosted for redundancy. Access is provided through a combination of credentials and MFA/ SSO.

We are the trusted partner of the ICAEW and both enterprise level and SME organisations across the UK public and private sector.

We believe that a technology programme can only be truly effective when it encompasses the human elements of culture and process that technology alone cannot reach. We take a holistic approach to our training, working with our clients to develop customised solutions that address their unique needs.

We provide onboarding, training and offboarding services included within the pricing. All prices are based on annual 12 month contracts with no termination notice period in place. We can customise and bespoke content at an additional price.

Technical requirements include connectivity and a HTML browser. Data is hosted within the EU and meets GDPR requirements. Data sovereignty is important to us and we can provide hosting options.

Data is exportable through PDF or Excel and an erasure policy is in place upon termination of contracts.

The platform has been designed with Security by design principles, by a former Chief Information Security Officer and utilising ISO27001 principles
