

Transform

Agentic AI and Autonomous Decision-making

G-Cloud – Service definition deck

Agentic AI and Autonomous Decision-making.

Transform build agentic AI systems that evaluate, decide, and act autonomously across complex business operations. A robust steel thread approach connects data, models, and governance, enabling trusted decision-making, continuous optimisation, and orchestration of AI workflows that scale reliably, safely, and transparently across your organisation, delivering measurable value, resilience, and competitive advantage faster.

Agentic AI and Autonomous Decision-making.

Service Features

- End-to-end “steel thread” from data ingestion to autonomous action.
- Multi-agent workflows coordinating complex decision-making processes.
- Human-in-the-loop controls and approvals
- Policy and risk-aware decision engines
- Knowledge retrieval Systems, RAG, Knowledge Graphs.
- Continuous learning and optimisation
- Integration with existing systems and APIs
- Scenario simulation and what-if analysis
- Transparent audit trails and explainability
- Value-led use case discovery and roadmap

Service Benefits

- Faster, higher-quality decisions at scale
- Reduced operational cost through intelligent automation
- Consistent, policy-compliant actions every time
- Improved resilience via always-on monitoring and response
- Better use of human expertise on complex, high-value work
- Shorter time-to-value with a reusable steel thread
- Increased transparency and auditability of decisions
- Rapid experimentation with new operating models
- Easier integration of new data, tools, and APIs
- Competitive advantage through adaptive, learning systems

Who we are.

We are Consultants & Builders

Who work across the **public and private sectors to solve organisational challenges**, design solutions and build digital services – working for clients like Department for Education, IKEA, Ministry of Justice and Local Government.

We work with you from problem statement to go-live. We don't hand off until the job is done, and **your people are ready.**

We are Transformation Partners

Who help our clients navigate change through consultancy, design, data & technology services, meeting them where they are to **turn knotty problems into elegant solutions** with maximum efficiency and impact.

Our people care about delivering the right things in the right ways. **We're all in.**

We are Thinkers & Doers

Who work out **what needs doing and does it**—simple as that. Our strategic thinking is better because we understand what delivery looks like, and our delivery is better because we stay aligned with the strategy and outcomes.

A can-do attitude backed by a why-do ethos.

We've been **innovating with AI** for decades

Organisations want to **unlock the benefits of AI** but are struggling with common **data issues**. Quality, veracity, duplication, volume, permissions—the list goes on, and on, and on. Or so it seems.

But we, at Transform, believe that **good data strategy and architecture** is the alpha and omega; **unlocking value** from your data today and powering the AI tools and applications that will unlock opportunity tomorrow.

Our practice meets you where you are and works *with* you to **define, design, build, and operate** data and AI products that deliver impactful change. Without compromising on **accuracy, ethics, sustainability and security**.

From data and AI strategies aligned to your organisation's goals, to effective Agentic AI solutions embedded in your teams, **we support you at every stage to deliver benefit and mitigate the risks of poor data and ungoverned technologies**.

**Transform is a fresh
alternative to Big
Consulting.**

What we do.

We **define, design, build** and operate systems that solve our clients' toughest challenges and seize their biggest opportunities.

That often means combining strategy, data, AI, technology, and change management. Sometimes we manage and operate the systems we create; other times, we hand it over for the client to run – standing by to make improvements when things change.

It all comes down to **making an impact**: improving lives, supporting citizens, streamlining workflows, and making the world a better place.

Who we do it for.

We specialise in public sector and public-facing organisations—from government agencies and local authorities to energy, utilities, transportation and healthcare.

We also work for some of the world's most dynamic brands across automotive, retail, financial services, and consumer goods.

If you have a lot of customers or citizens, a complex data ecosystem, a legacy tech stack, and an ambition to make a big impact... we should talk.

How we do it. (Through diverse multi-disciplinary teams no silos, no competing targets, no ego.)

Technology	Research & Service Design	Data & AI	Product & Delivery	Consulting
Data Engineering & Data Architecture	Research	Data & AI Strategy	Product Management	Change Management
Software Engineering	Service Design	Data Analytics & Science	Delivery Management	Strategy Development and Realisation
DevOps & Test Engineering	Content Design	CRM Services	Business Analysis	Programme Management and Governance
Enterprise & Solution Architecture	User Experience			Target Operating Model

Who we work with.

Why us?

Full end-to-end capabilities.

Transformation fails because it's disjointed. We're management consultants who **deliver what we design** with end-to-end capabilities, deep domain experience and an open, collaborative culture.

We have the breadth and depth of Big Consult without the rigidity, **meeting you where you are** - working with you, not *at* you - to leave you better off.

We're personally invested. This work matters.

Multi-disciplinary teams.

Our strategic thinking & delivery is better because **we focus on strategy and outcomes**, not silos. Instead of the rigid playbooks of Big Consult, we assemble unified, multi-disciplinary teams to consult, design, engineer and deliver new digital experiences.

We understand the **power of diversity of people and teams** and are committed to making a bigger impact faster.

High confidence/Low ego. Many lenses, no silos. In it together.

A specialisation in public-facing organisations.

We have **deep experience with local and national government** and know how to navigate the corridors of government, from local councils to national agencies to railroads and utilities.

Our people are united around a commitment to make a difference to people's lives. **Got citizens to serve?** We should talk.

We believe in the power of technology to change lives.
