Executive Summary

Organisations across sectors face significant pressure to leverage data effectively. Regulatory requirements demand transparent performance reporting. Operational complexity requires integrated data capabilities. Yet most organisations lack the internal data management capability to navigate this complexity effectively.

LASHAN Digital delivers vendor-agnostic data management services spanning the full spectrum of data disciplines—Data Strategy, Data Governance, Data Architecture, Data Platform Implementation, and Analytics & Reporting. Our sector expertise and proven accelerators enable organisations to establish data capability in weeks rather than months.

We support you throughout your entire data transformation journey—from strategy development through platform implementation, governance establishment, and ongoing optimisation.

Core Data Management Capabilities

LASHAN Digital provides the full spectrum of data management disciplines required to guide data transformation. Our services are vendor and technology agnostic—we provide independent advice focused on your organisation's needs.

Data Strategy

Vision and roadmap development aligned with business objectives. We establish the strategic foundations that enable coherent, governed data initiatives across your organisation. This includes current state assessment, vision and principles definition, use case prioritisation, roadmap development, business case creation, stakeholder alignment workshops, and success metrics frameworks.

Data Governance

Policy frameworks and accountability structures that ensure data is managed as a strategic asset. Deliverables include policy framework development, data ownership models, stewardship structures, RACI definition, data catalogue implementation, metadata management, and regulatory compliance mapping.

Data Architecture

Designing the data foundations for analytics, reporting, and AI. This includes target state architecture design, logical and physical data models, integration pattern definition, technology selection support, platform design using medallion architecture patterns, and semantic layer design.

Data Platform Implementation

Building modern data platforms on your choice of cloud infrastructure. We deliver platform deployment on Databricks, Microsoft Fabric, or other platforms; pipeline development using ETL/ELT patterns; data integration and API development; data quality rule implementation; and reporting layer creation.

Analytics & Reporting

Enabling insight-driven decision making through effective analytics. This encompasses dashboard development, report creation, KPI frameworks, regulatory reporting, board packs, self-service analytics enablement, and Power BI/Tableau implementation.

Service Features and Benefits

Discipline	Features	Benefits
Data Strategy	Current state assessment, vision definition, use case prioritisation, roadmap development, business case, stakeholder workshops, success metrics	Clear data vision aligned with business strategy. Prioritised initiatives. Investment justification. Stakeholder buy-in.
Data Governance	Policy frameworks, ownership models, stewardship structures, RACI definition, data catalogue, metadata management, compliance mapping	Data treated as strategic asset. Clear accountability. Regulatory compliance. Consistent data definitions.
Data Architecture	Target state design, logical/physical models, integration patterns, technology selection, medallion architecture, semantic layer design	Scalable data foundations. Single source of truth. Integration capability. Technology roadmap.
Data Platform	Platform deployment (Databricks/Fabric), pipeline development, ETL/ELT, data integration, API development, data quality rules	Modern cloud-based platform. Automated data flows. Quality assurance. Reduced manual processing.
Analytics & Reporting	Dashboard development, report creation, KPI frameworks, regulatory reporting, board packs, self-service analytics, Power BI/Tableau	Insight-driven decisions. Regulatory compliance. Executive visibility. User empowerment.

Service Delivery Models

Data Management as a Service (DMaaS)

Retained data management capacity across strategy, governance, architecture, and analytics disciplines. Typically 2-4 days/week providing reviews, governance, design authority, and standards management.

Strategic Advisory & Assessment

Focused engagements delivering data strategy, maturity assessments, architecture reviews, or governance framework design. Executive-level guidance on data transformation, platform selection, and data roadmaps.

Data Platform Implementation

End-to-end delivery of modern data platforms—from discovery through design, build, and go-live. Includes data engineering, pipeline development, integration, and analytics layer implementation on Databricks, Microsoft Fabric, or other cloud platforms.

Flexible Delivery Model

LASHAN Digital offers a flexible delivery model that can combine UK-based consultants with offshore technical teams. Client-facing activities are delivered by UK consultants. Technical delivery can utilise offshore capability where appropriate. The delivery model is entirely the client's choice.

About LASHAN Digital

LASHAN Digital is a digital and data transformation consultancy and delivery partner. With over 20 years of enterprise architecture experience, we help organisations navigate complexity, adopt emerging technologies responsibly, and deliver lasting transformation.

Our Expertise: Data Strategy • Data Governance • Data Architecture • Data Platform Implementation • Analytics & Reporting—adapted for regulated, operationally complex environments.

Sector Experience: Deep expertise in UK social housing and social care, with proven experience in regulatory reporting, compliance monitoring, and operational analytics. This sector knowledge—combined with broader enterprise experience—enables practical delivery across industries.

Vendor Agnostic: We provide independent, unbiased advice. Our recommendations are based on your organisation's needs, not vendor relationships. We work across all major technology platforms including Databricks, Microsoft Fabric, and other cloud solutions.
