

## **Data Migration Consultancy Services**

### **Overview**

We provide a comprehensive data migration strategy, design, and planning service to ensure a seamless transition from legacy systems to new Cloud solutions. Our approach includes assessing data quality, exploring viable migration options, and managing all aspects of assurance, planning, procurement, and delivery.

### **Service Features**

- Extensive experience in legacy data migration
- Expertise in designing data libraries
- Analysis of all application data, management information, and reporting requirements
- Assessment of existing system data schema and reporting structures
- Identification of required business process changes or introductions
- Consideration of timing and decommissioning of migrated legacy systems
- Execution of Extraction, Transformation, and Load (ETL) processes
- Use of a range of data quality assessment tools

### **Service Benefits**

- Full exploitation of Cloud services for data
- Smooth transition of legacy data
- Solutions for both legacy data and legacy functionality migration
- Improved availability of historical information through enhanced search capability
- Wider access to more usable data
- Enablement of modern, scalable database clusters
- Decommissioning of legacy systems

- Improved data security
- Shared learning and faster development through peer organisation assessments
