

Deploy

Service overview

CAPSLOCK Deploy provides skilled cyber security professionals to support public sector organisations operating cloud-enabled services. The service uses a Train-Hire-Deploy model to embed cyber professionals into customer teams, supporting delivery, assurance, and operational resilience while reducing recruitment risk and lead time.

Service description

CAPSLOCK recruits, trains, and deploys cyber security professionals who support organisations using cloud services. Professionals are embedded within customer teams and operate under agreed scopes of work.

The service supports cloud security operations, governance, assurance, and secure adoption activities. CAPSLOCK remains the employer and provides ongoing performance management, professional development, and support throughout the engagement.

What the service provides

Core service elements

- Matching cyber security skills to specific organisational needs.
- Embedded cyber security professionals
