

Chronosoft
Chronicler

GOVERNMENT INCIDENT AND OPERATIONS PLATFORM

Chronicler is a mission-critical incident and operations management platform built for government agencies, coordination centres, and frontline operational teams.

Designed and supported in Australia, Chronicler enables structured data capture, real-time tasking, and a single operational picture across day-to-day operations and major incidents.

Whether coordinating multi-agency response, managing routine operational workflows, or producing executive-ready reporting, Chronicler strengthens clarity, accountability, and decision-making under pressure.

Operational assurance

- 99.999% uptime across hosted environments
- 24/7 priority support options, with incident response from 15 minutes
- Rapid deployment for new programmes, operations, and agency onboarding
- Configurable out of the box, no custom development required
- Integrate Orchestrator (workforce), Locator (mapping), and Medstat (clinical workflows) as required

Multi-agency coordination

Create a shared operational picture across agencies and partners with controlled access, clear ownership, and consistent reporting.

Real-time incident logging

Capture events as they happen with structured fields, time stamps, attachments, and traceable decisions.

Integrated procedures and plans

Attach and trigger SOPs, checklists, and playbooks to support standardised response and governance.

Live dashboards and SitRep's

Operational summaries, task progress, and key metrics on one screen, ready for briefings and situational reporting.

Geospatial intelligence

Map teams, assets, and critical locations to strengthen situational awareness and improve allocation decisions.

Offline capability

Maintain functionality in low-connectivity environments using Chronobox and Chronolink, with automatic synchronisation when online.

Chronosoft Chronicler

Built for government operations. Trusted under pressure.

Chronicler is designed for government environments where operational decisions must be fast, defensible, and review-ready. It brings incidents, actions, communications, and evidence into one secure platform, enabling coordination teams to maintain clarity across complex, evolving situations.

By standardising tasking, escalation, and situational reporting, Chronicler strengthens established operating models without forcing change. Teams retain familiar procedures while gaining improved visibility, continuity across shift change, and a reliable source of truth for internal and external stakeholders.

- Browser-based, mobile-ready
- Compatible with Windows, iOS, Android, and macOS
- WCAG 2.1 AA accessibility compliance
- Tiered deployment model for agency, regional, and whole-of-government use

Governance, assurance and reporting.

Governance, assurance and reporting delivers structured, auditable records and exportable outputs so oversight, compliance evidence, and after-action review remain consistent and ready for scrutiny.

- Structured audit trails for incidents, actions, changes, and outcomes
- Configurable workflows aligned to agency policies and operating models
- Role-based access control with multi-factor authentication support
- AES-256 encryption at rest and TLS 1.2+ encryption in transit
- Exportable reporting for briefings, compliance, investigations, and reviews
- Security controls aligned with government expectations, including ISM-aligned approaches where required

Why government agencies choose Chronicler

- ✓ Supports multi-team visibility with controlled access and clear accountability
- ✓ Enhances established coordination and reporting procedures without disruption
- ✓ No coding or custom development needed, configurable out of the box
- ✓ Live dashboards, auditable logs, and exportable reporting for assurance
- ✓ Works reliably in low-connectivity conditions with offline continuity
- ✓ Modular suite options: add workforce, mapping, and clinical capability as required
