

Tetra Connect Service Definition

G-Cloud 15: Lot 2b: Software as a Service (SaaS)

COMPANY OVERVIEW

Tetra Technology is a software consultancy specialising in identity resolution and digital transformation. Known for innovation, we empower clients with agile methodologies and cutting-edge software, driving growth and operational efficiency.

Experience

Our breadth and depth of collective experience as technologists gives you access to the exceptional knowledge and expertise needed to deliver.

Integrity

Our people have been trusted to design, develop and deliver critical public and private sector technology.

Flexibility

We quickly master new business domains and form high-performing multi-discipline teams to meet all our client requirements.

Focus

Our Leadership team is immersed from start to finish with a singular focus on our clients - meaning our attention is always with you.

TETRA CONNECT OVERVIEW

Tetra Connect offers a streamlined solution for the intricate process of identity matching, delivering precise outcomes customised to meet your specific requirements. Our platform simplifies identity resolution, ensuring seamless and dependable operations for your business. By harnessing enriched data insights, we empower you to make informed decisions with confidence.

Features

- Real-time identity search: Achieve instantaneous and precise results.
- Advanced data matching: Easily manage name variations and aliases.
- Fuzzy matching: Utilise phonetic queries for thorough outcomes.
- Customisable scoring: Personalise result sets based on specific metrics.
- Efficient data management: Index and synchronise big data seamlessly.
- Seamless integration: Effortlessly connect with multiple database providers.
- Cloud-native architecture: Deploy flexibly on-premises or as a managed service.

Benefits

- Mitigates risk of fraudulent identities, safeguarding organisational integrity.
- Provides a scalable, maintainable solution for long-term organisational growth.
- Ensures data security and confidentiality, safeguarding sensitive information.
- Facilitates seamless integration with existing systems through a REST API.
- Improves user experience with an intuitive and interactive interface.
- White-box components are explainable and transparent, enhancing understanding.
- Configuration management through the user interface simplifies operations.
- Continuous deployment supported allowing value to be quickly realised.
