CenarioVR Service Definition

Create Immersive Experiences with the Easiest VR Platform

No Coding Required!

VR Course Authoring
Develop VR Content with Ease and Speed

xAPI Tracking

Measure learning and retention with our built-in xAPI data tracking features and analytics dashboard showing performance in real time.

Scene Starters

Upload any equirectangular image or 360-degree video. Then select your starting scene to add questions, hotspots, and interactivity.

Real-Time Scoring

Engage learners with live score updates while you assess and evaluate quizzes, responses, and feedback.

Content Delivery

Access content on the web, mobile devices, authoring apps, Oculus Go/Rift/Quest, HTC Vive Focus, Samsung Gear VR, cardboard headsets, and more!

Interactivity & Conditions

Engage learners by adding conditional branching with varied outcomes, timed objects, actions, linked scenes, quizzes, multimedia, and hot spots.

Publishing Formats

Easily publish to SCORM formats, xAPI, cmi5, and HTML. Or, publish courses to your LMS, authoring app, mobile device, or nearly any headset.

3D Objects & Modeling

Add an object in GLB format that can be rotated, positioned, and animated. Then, use it as a hotspot that triggers animated movement, and watch it come to life!

Media Library With 3D Objects

Search a whole gallery of icons, actions, 3D shapes, and 3D objects. Color and customize all of your objects any way you like!

Immersive Audio

Experience a simulation more realistically by placing audio exactly where you hear it - right, left, forward, or behind you. Videos include spacial audio, and volume can be adjusted for each object.

Getting Started Is Simple

CAPTURE: Upload any 360° photo or 3D video footage with one click.

CREATE: Add hotspots, animation, conditions, quizzes, and more.

SHARE: Publish to the web, mobile, LMS's, authoring apps, and headsets

TRACK: View live scores and a dashboard of xAPI analytics.
