

NimbusMobile: Smartphones as a Service

G-Cloud 15 Pricing Document

Public Cloud Platform & Licence Costs

NimbusMobile designed to be highly flexible. Unlike traditional "per user" licensing, the SaaS version of NimbusMobile separates user access from platform consumption to maximise cost-efficiency and encourage collaboration.

Unlimited Users: *The NimbusMobile Platform grants your organisation an unlimited number of user accounts. Customers can onboard entire teams without incurring additional per-user licence fees.*

Per-Device Fee: *Customers pay a fixed monthly subscription for each NimbusMobile Device. It does not matter how many users use the device.*

Exit Nodes: *NimbusMobile Devices have access to the internet via our proprietary global network of unattributable Exit Nodes. The capabilities of these Exit Nodes are tiered and explained in the Managed Exit Node section below.*

UK Mobile Numbers: *NimbusMobile offers the ability for users to receive SMS messages directly to their devices, thus removing the need to manage a pool of PAYG SIM cards. These phone numbers are real numbers and not virtual numbers that are rejected by online platforms. It is also possible for customers to port existing mobile numbers to NimbusMobile. Porting existing numbers removes the obligation and effort of keeping them topped up. International numbers are available.*

Item	Unit Price	Notes
NimbusMobile Device Licence	£120.00	Per Device / Year
Physical Device Hub (attaches 5 devices)	£875.00	Per Year

Managed Exit Nodes

All our managed Exit Nodes offer unlimited data and unattributable static IP addresses. No additional software, appliances or configurations are required. A single Exit Node can be shared between multiple NimbusMobile Devices or each Device can be assigned a unique Exit Node.

Exit Node (Basic)

Best for general web browsing, accessing public news sites, and low-sensitivity open-source research. Some sophisticated sites (banking, streaming, social media login pages) may detect this as a proxy/VPN and present CAPTCHAs or block access.

Exit Node (Standard)

Best for standard OSINT investigations, accessing corporate websites, and long-term monitoring where a reputable consistent IP address is required to maintain access. Standard Exit Nodes offer better stability for creating accounts, but may still be flagged by highly sensitive sites as a proxy/VPN.

Exit Node (Enhanced)

Best for False Online Persona management and accessing geo-restricted content or content protected by aggressive anti-bot and censorship technologies. Bypasses strict geo-blocks and anti-proxy filters that normally reject commercial VPNs.

Item	Unit Price	Notes
Exit Node (Basic)	£315.00	Per year
Exit Node (Standard)	£1,500.00	Per year
Exit Node (Enhanced)	£4,500.00	Per year
