Other workstreams

REDUCE DATA DISCOVERY BY >90%

- ❖ Full inventory of business data in SAP
- ❖ Visibility by organisation and business area
- ❖ Analyses billions of records across over 100,000 database tables
- ❖ Simulates scope and size of a data migration
- ❖ Easy to consume reporting
- ❖ Carve-outs, S/4HANA and cloud

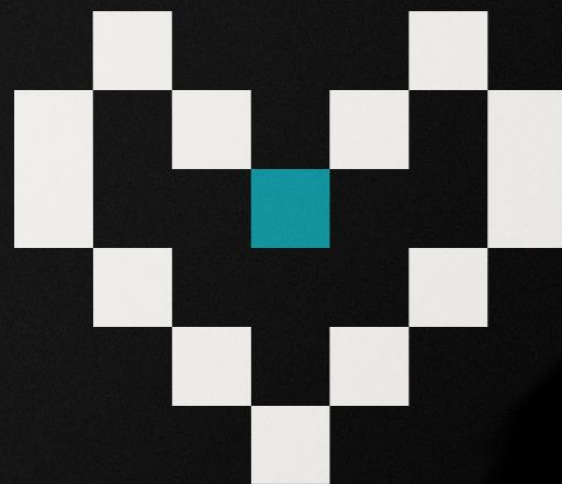

A HEAD START

The Pioneer data discovery platform provides a complete and accurate view of a company's business data in SAP broken down by organisation, business area and time period.

It reduces the time and effort for data discovery by over 90%, helping customers to get a head start on their SAP transformation.

PIONEER KEY COMPONENTS AND FUNCTIONS

- **Technical analysis**
 - High performance scan of billions of records across over 100,000 database tables
 - Full technical inventory of SAP data by functional area
 - Foundation and reference for business data reporting
- **Organisational analysis**
 - Usage and ageing analysis of organisational areas (companies, plants, etc)
 - Identification of active and inactive organisations
 - Insights and information on impact of time-slices and archiving
- **Business data discovery**
 - Scope of business data objects and volumes in SAP
 - Comprehensive and customisable proprietary ruleset
 - Flexible and scalable reporting by project and organisational group
 - Coverage of SAP standard, industry-specific and custom modules
 - Business data breakdown by company code and line of business
- **Further data analysis**
 - Detailed data profiling for business data objects and SAP tables
 - Complete data catalogue for all business objects
 - Drill-in data profiling and attribute analysis
 - Analysis of open and active main data objects
