

Pricing is based on a time-limited Software-as-a-Service subscription, which covers access to the Cogniss platform for delivery of a one or two-day hackathon, as outlined in the accompanying Service Definition.

Pricing is per organisation, per hackathon instance, unless otherwise stated.

It includes time-limited access to the Cogniss platform to support rapid design, configuration and demonstration of digital health applications during the hackathon period. All workshops and support are delivered solely to enable effective use of the Cogniss platform.

The subscription price is based on a number of factors:

- 1. Whether the hackathon is delivered over one or two days
- 2. Number of participants and teams supported
- 3. Number of applications created during the hackathon
- 4. Size and type of organisation
- 5. Whether continuation access is required following the hackathon
- 6. Number of applications supported post-hackathon
- 7. Duration of continued platform access

The price listed is for delivery of a single one or two-day hackathon for a public sector organisation, using the Cogniss platform.

Please note, all prices are exclusive of Value Added Tax. The price does not include venue hire, catering, refreshments or other event logistics or participant recruitment. Responsibility for all non-platform elements of hackathon delivery remains with the purchasing organisation.
