Usage Pricing

The service is priced on an MAU (Monthly Active User) basis. If the user has done an authentication (or DVS signing, if applicable/implemented) in the calendar month, then that user counts as a monthly active user. Monthly inactive users (i.e. users who have not authenticated in that calendar month), are not charged.

The per month charge on an MAU basis is: £0.10 (ten pence) for authentication only

The per month charge on an MAU basis is: £0.15 (fifteen pence) for implementations which use both authentication and DVS signing.

The usage pricing **IS** reduced by the “Discount percentage by annual call-off contract value”

Minimum Charge

There is a minimum charge of £250 / month per integration point. An example of an integration point is for a particular group of users, there is a website which they can login to, and for the same pool of users, they can also login to a mobile application.

There is a minimum charge of £2,000 / month should the client choose to run the service in a Hybrid Cloud. Specifically, this means that the client will part-run their own Distributed Trust Authority server, which will be provided by MIRACL.

Minimum Charges are added together resulting in the monthly minimum charge. If the monthly minimum charge is greater than the usage charge above, the monthly minimum charge will be invoiced.

The minimum charge is **NOT** reduced by the “Discount percentage by annual call-off contract value”, although at larger volumes where the discount percentage comes into effect for usage, it is likely unlikely that the minimum charge will be larger than the usage pricing.

Example

A client chooses to implement both authentication and DVS signing.

They have 2 integration points, 1 for web, 1 for mobile apps on a single pool of users.

Their minimum monthly charge is £500 (£250/integration point)

In the first month, they have 100 active users

$100 \times £0.15 = £15$

The charge will be £500 (minimum charge)

In the second month, they have 20,000 active users

$20,000 \times £0.15 = £3,000$

(they are above the minimum charge level, so the minimum charge is ignored)
