G-Cloud 15 | Lot 3 – Cloud Support Services

Cloud & Digital Maturity Assessment Services

Service Description

Comprehensive maturity assessment services evaluating organisational readiness across cloud adoption, DevOps practices, AI/ML capabilities, data management, and digital transformation. Our experts deliver actionable roadmaps identifying capability gaps, benchmarking against industry standards, and prioritising investments to accelerate your modernisation journey and maximise return on technology investments.

Service Overview

The Cloud & Digital Maturity Assessment Services help organisations understand where they are on their digital transformation journey and what they need to do to progress.

Effective transformation requires honest assessment of current capabilities. Many organisations overestimate or underestimate their maturity, leading to strategies that are either too ambitious or too conservative. Structured assessment provides the evidence needed for realistic planning

Our assessment services cover multiple dimensions:

Cloud Adoption:

We assess cloud maturity using industry frameworks including Cloud Adoption Framework and TOGAF. This includes strategy, governance, operations, and technical capabilities.

DevOps and DevSecOps:

We evaluate delivery practices using DORA metrics and industry benchmarks. This identifies opportunities to improve deployment frequency, lead time, and reliability.

AI and ML Readiness:

We assess organisational readiness for AI adoption including data, skills, governance, and use case clarity.

Data Maturity:

We evaluate data capabilities including governance, quality, architecture, and analytics.

Cybersecurity:

We assess security posture against frameworks including NCSC guidance, ISO 27001, and Cyber Essentials.

Agile Delivery:

We evaluate agile maturity using established frameworks and identify opportunities for improvement.

Service Features

- Cloud Adoption Maturity Assessment using industry frameworks (CAF, TOGAF)
- DevOps and DevSecOps capability evaluation with DORA metrics benchmarking
- AI and Machine Learning readiness assessment for enterprise adoption
- Data maturity evaluation covering governance, quality, and analytics
- Cybersecurity posture assessment aligned to NCSC and ISO 27001
- Agile and delivery capability assessment using SAFe and Scrum frameworks
- FinOps and cloud financial management maturity evaluation
- Infrastructure modernisation readiness assessment for hybrid/multi-cloud
- Digital skills and organisational change readiness assessment
- Sustainability and GreenOps maturity assessment for technology operations

Service Benefits

- Identify capability gaps with clear prioritised remediation roadmaps
- Benchmark organisational maturity against industry standards and peers
- Accelerate cloud adoption with evidence-based strategic recommendations
- Reduce transformation risk through structured readiness evaluation
- Optimise technology investments with data-driven decision support
- Align technology capabilities with business strategy and objectives
- Improve DevOps velocity and software delivery performance metrics
- Prepare organisations for successful AI and automation adoption
- Strengthen governance, compliance, and security posture systematically
- Enable continuous improvement through repeatable assessment frameworks
