Cloud Security, Risk, And Assurance

This category supports organisations operating under heightened security, regulatory, or public accountability requirements. Buyers often need to balance innovation with assurance, without defaulting to risk-averse stagnation.

We embed security and risk management into cloud design and operations, rather than treating them as bolt-ons. Our services cover architecture, controls, assurance activities, and audit readiness, aligned to recognised standards and government expectations.

The outcome is improved security posture, clearer risk ownership, and stronger assurance for stakeholders. Clients are able to move faster with confidence, supported by evidence-based controls and defensible security decisions.

Threat Modelling And Cloud Risk Assessment

Cloud Security, Risk,
and Assurance

This service helps organisations identify and understand security risks in cloud environments before they materialise. Wiz Digital performs structured threat modelling and risk assessments that analyse architectures, workloads, and data flows, enabling informed security decisions and proactive risk mitigation aligned with organisational and public sector requirements.

Service Overview

- Definition of cloud threat modelling approach
- Assessment of cloud architectures and workloads
- Analysis of data flows and trust boundaries
- Identification and categorisation of threats
- Assessment of risk likelihood and impact
- Definition of mitigation and control options
- Alignment with security architecture designs
- Consideration of regulatory and compliance factors
- Facilitated risk and threat review workshops
- Clear threat modelling documentation

Service Features

- Improved visibility of cloud security risks
- Earlier identification of threats and weaknesses
- Reduced likelihood of security incidents
- Better-informed security and architecture decisions
- Stronger alignment with organisational risk appetite
- Improved compliance and assurance confidence
- Reduced cost of late-stage security fixes
- Clear prioritisation of mitigation actions
- Stronger governance of cloud risks
- Sustainable foundation for secure cloud adoption
