# 3

## Cloud Migration And Modernisation Planning

This category supports organisations that need to move to cloud in a controlled, sequenced way, often while maintaining live services and managing technical debt. Common challenges include poor visibility of dependencies, unrealistic timelines, and underestimation of migration risk.

Our planning approach combines technical assessment with business and operational context. We analyse application and infrastructure estates, identify suitable migration patterns, and design phased plans that reflect risk, value, and readiness. Planning explicitly considers data, identity, security, and service continuity.

The result is a credible, prioritised migration plan that reduces uncertainty and supports informed investment decisions. Clients avoid rushed migrations, minimise disruption, and create space for meaningful modernisation rather than simple lift-and-shift.

# Identity And Access Migration Planning

## Cloud Migration and Modernisation Planning

This service supports organisations planning the migration of identity and access services to cloud platforms. Wiz Digital assesses existing identity architectures, access models, and dependencies to define secure and well-sequenced migration approaches aligned with organisational security and governance requirements.

### Service Overview

- Assessment of current identity and access architecture
- Review of user, role, and access models
- Analysis of integrations and dependencies
- Definition of cloud identity target state
- Planning of identity migration approaches
- Consideration of security and compliance requirements
- Identity lifecycle and access governance planning
- Identification of migration risks and constraints
- Cutover and transition planning support
- Clear identity migration planning documentation

### Service Features

- Clear and controlled identity migration plans
- Reduced risk of access disruption
- Improved security during transition
- Better governance of identity changes
- Improved compliance with access policies
- Reduced likelihood of authentication failures
- Improved understanding of identity dependencies
- More predictable migration timelines
- Stronger alignment with cloud security approaches
- Increased confidence in identity migration outcomes
