Cloud Migration And Modernisation Planning

This category supports organisations that need to move to cloud in a controlled, sequenced way, often while maintaining live services and managing technical debt. Common challenges include poor visibility of dependencies, unrealistic timelines, and underestimation of migration risk.

Our planning approach combines technical assessment with business and operational context. We analyse application and infrastructure estates, identify suitable migration patterns, and design phased plans that reflect risk, value, and readiness. Planning explicitly considers data, identity, security, and service continuity.

The result is a credible, prioritised migration plan that reduces uncertainty and supports informed investment decisions. Clients avoid rushed migrations, minimise disruption, and create space for meaningful modernisation rather than simple lift-and-shift.

Infrastructure And Network Migration Planning

Cloud Migration and Modernisation Planning

This service supports organisations planning the migration of infrastructure and network services to cloud environments. Wiz Digital assesses existing infrastructure, connectivity, and dependencies to define secure, resilient, and well-sequenced migration approaches aligned with cloud strategy and operational requirements.

Service Overview

- Assessment of current infrastructure and network estate
- Review of connectivity, dependencies, and constraints
- Planning of cloud network and connectivity architecture
- Definition of infrastructure migration approaches
- Consideration of security, resilience, and availability
- Hybrid and transitional connectivity planning
- Review of identity and access dependencies
- Identification of migration risks and constraints
- Cutover and transition planning support
- Clear infrastructure migration planning documentation

Service Features

- Clear and structured infrastructure migration plans
- Reduced risk of network-related migration issues
- Improved security and resilience during transition
- Better coordination across infrastructure changes
- Reduced likelihood of service disruption
- Improved understanding of technical dependencies
- More predictable migration outcomes
- Stronger alignment with cloud architecture
- Reduced need for rework
- Increased confidence in infrastructure migration
