Data Platforms, Analytics, And Information Management

This category addresses the growing need to treat data as a strategic asset rather than a by-product of systems. Common problems include fragmented data platforms, poor data quality, unclear ownership, and limited trust in analytics outputs.

Our approach integrates platform architecture, governance, and analytics enablement. We design modern cloud data platforms alongside clear information management frameworks, ensuring that data is accessible, secure, and fit for purpose.

Clients gain reliable data foundations that support analytics, reporting, and decision-making. This improves insight, reduces manual effort, and enables more confident use of data across the organisation.

Data Platform Migration Planning (Lakehouse And Warehouse)

Data Platforms, Analytics, and Information Management

This service supports organisations planning the migration of existing data platforms to cloud-based lakehouse or warehouse architectures. Wiz Digital assesses current platforms, data assets, and dependencies to define migration approaches that minimise risk, support governance, and align with organisational data and analytics objectives.

Service Overview

- Assessment of existing data platforms and architectures
- Classification of data assets and workloads
- Definition of lakehouse and warehouse migration approaches
- Analysis of dependencies and integrations
- Sequencing and prioritisation of migration activities
- Assessment of migration risks and complexity
- Consideration of security and data governance requirements
- Support for cutover and transition planning
- Documentation of assumptions and constraints
- Clear data platform migration planning outputs

Service Features

- Clear and structured approach to data platform migration
- Reduced risk during complex platform transitions
- Improved sequencing and planning accuracy
- Better alignment with data and analytics strategy
- Reduced likelihood of migration delays
- Improved governance and security readiness
- Clear visibility of dependencies and risks
- Stronger preparation for migration delivery
- More predictable migration outcomes
- Sustainable foundation for cloud-based analytics
