Cloud Migration And Modernisation Planning

This category supports organisations that need to move to cloud in a controlled, sequenced way, often while maintaining live services and managing technical debt. Common challenges include poor visibility of dependencies, unrealistic timelines, and underestimation of migration risk.

Our planning approach combines technical assessment with business and operational context. We analyse application and infrastructure estates, identify suitable migration patterns, and design phased plans that reflect risk, value, and readiness. Planning explicitly considers data, identity, security, and service continuity.

The result is a credible, prioritised migration plan that reduces uncertainty and supports informed investment decisions. Clients avoid rushed migrations, minimise disruption, and create space for meaningful modernisation rather than simple lift-and-shift.

Application Portfolio Assessment And Migration Planning (6Rs)

Cloud Migration and Modernisation Planning

This service helps organisations understand how their application estate can transition to the cloud. Wiz Digital assesses applications across technical, operational, and risk dimensions and applies the 6Rs framework to identify appropriate migration approaches, priorities, and sequencing aligned with organisational objectives.

Service Overview

- Discovery and inventory of application portfolios
- Assessment of application architecture and dependencies
- Evaluation of cloud suitability and constraints
- Classification of applications using the 6Rs framework
- Identification of migration risks and complexity
- Analysis of integration and data dependencies
- Prioritisation and sequencing of migrations
- Definition of high-level migration approaches
- Documentation of assumptions and constraints
- Clear application migration planning outputs

Service Features

- Clear visibility of application migration options
- Reduced risk of inappropriate migration choices
- Better sequencing of cloud migrations
- Improved predictability of migration programmes
- Early identification of technical dependencies
- Reduced likelihood of migration delays
- Stronger alignment with cloud strategy
- Better planning for delivery phases
- Improved confidence in decision-making
- Solid foundation for successful cloud migration
