

Managed eDiscovery/eDisclosure Services

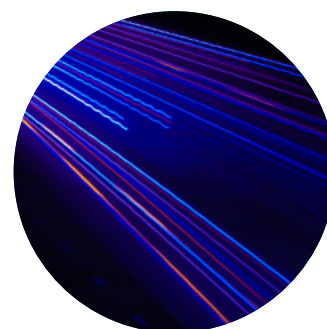

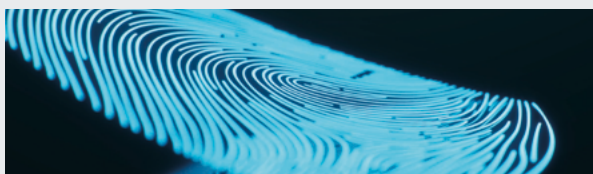

CCL's long pedigree of partnership with legal clients, leading law enforcement, government, and corporate clients means that we understand the varied needs of different sectors which enables us to guide and support our clients throughout the most complex matters.

Whether you need a complete 'turn-key' solution, a flexible solution to support an in-house team or an on-demand service, we can help you through the entire eDisclosure process – from data identification and collection, through to production and presentation.

Forensic Collection and Preservation

CCL offers the gold standard for collections work. Our quality is based on 20+ years working alongside law enforcement agencies worldwide and a digital forensics lab that is Europe's largest and one of the few UK labs to hold ISO 17025 accreditation.

In order to maintain secure evidence continuity throughout the duration of a matter, documents must be acquired using a process that is reliable, repeatable and auditable. CCL does that and, thanks to proprietary technology, at incredible speeds too – minimising cost, disruption and business impact.

Data Processing

With so much of discovery spend going into the document review phase, no-one wants to be wasting time and money on reviewing non-relevant documents. That means getting an early grip on your collected data volumes, with a processing phase quickly searching, filtering and culling data to generate a reduced in size, increased in relevancy document set.

This in turn accelerates access for review teams (the client's or ours) to the document set in order to drill down into evidence and/or investigative triage or full document review.

Review

CCL has invested in heavyweight tools to do the heavy lifting across EDRM*, and that's especially true of today's review platforms. While careful to remain agnostic and open to client preference, we are also committed to using only best-of-breed technologies.

We have developed a wealth of expertise around market-leading eDiscovery tools, providing a highly cost-effective, customisable and scalable solution for the management of any size and complexity of data set.

The review phase is about identifying the responsive data and uncovering what matters - turning data into information and information into insight. We help clients draw on the full workflow, analytical and search capabilities of their chosen review software to cull and contextualise their data at speed, finding patterns and exploring trends to readily identify the key issues.

Analysis

A reduced, more relevant set of documents is still typically too large and complex to wrangle into sharper meaning. CCL can bring the full might of leading-edge technologies such as email threading, language identification, clustering and conceptual searching to cull volumes, and advanced techniques such as continuous active learning to accelerate the review process.

Our analysis stage encompasses bespoke workflows and strategies inclusive of advanced analysis tools such as transcription, translation, and summarisation. Transcription converts audio and video evidence into searchable text, enabling faster identification of relevant content. Translation ensures multilingual documents can be reviewed without delays. Summarisation condenses large volumes of material into clear, concise overviews, allowing legal teams to prioritise key evidence efficiently. Together, these capabilities streamline the eDiscovery process by making complex data more accessible and actionable ultimately reducing manual effort, improving accuracy, and accelerating case preparation.

Production and Presentation services

Defensibility and quality are hallmarks of the CCL approach and that applies across EDRM*, end-to-end. So clients can expect high grade production and presentation services that are mindful of deadlines and careful on costs.

Production options include native only, image only or mixed native and image exports which are EDRM*-compliant.

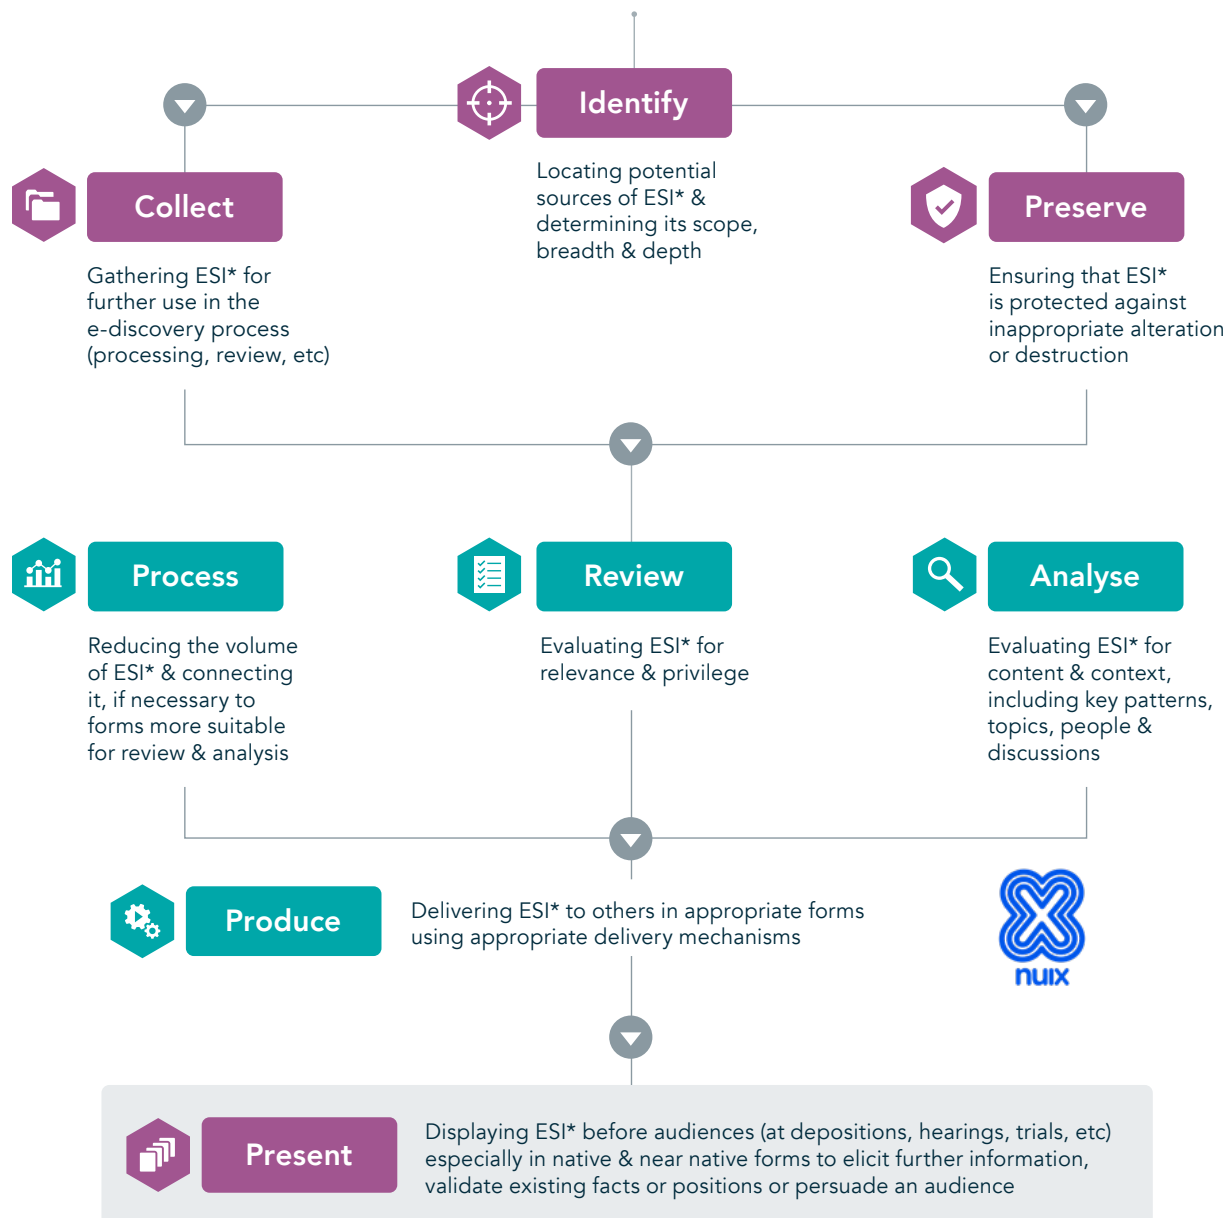

We can also generate full electronic disclosure lists, to comply with the Civil Procedure Rules detailed in Practice Direction 31B. We build the queries to a client's precise specifications, removing the burden of manual production from their own legal team. Every document gets a unique reference number, enabling rapid identification and retrieval when needed.

Project management

We use a robust project management approach and stringent quality controls. So much of our day-to-day work is driven by the highest evidential standards - those that will stand up in criminal court - that process, integrity and compliance are implicit in everything we do.
