

Custom Software Development Consultancy – Delta Technology Services

Service Overview

Delta Technology Services delivers high-end custom software consultancy designed to help public-sector organisations build modern, secure, and scalable cloud-native applications. Our team of senior architects and certified Azure Developers specialise in turning complex requirements into elegant solutions using C#, .NET, and Azure services. We provide deep technical expertise paired with a strong product-focused mindset, helping organisations reduce risk, accelerate delivery, and adopt industry-leading development practices. Our consultants excel in problem-solving, technical leadership, and guiding organisations through the full journey from idea to architecture, ensuring digital services are built on solid foundations.

Scope of Service

Discovery and Spike assessments, Azure architecture, .NET consultancy, API design, cloud-native patterns, DevOps guidance, Review/Delivery planning.

Roles & Responsibilities

Delta provides architects and developers; customers provide product ownership and SME access.

Security and Compliance

Consultancy uses secure coding standards, MFA, least-privilege access, and Microsoft cloud security baselines.

Onboarding & Offboarding

Discovery workshops, architecture validation, environment access. Offboarding includes documentation and knowledge transfer.
