

Terms & Conditions

1. Site Blocking

The aggregation scope is defined based on the current behaviour of the source websites. If additional blocking is imposed by the source during crawling, timelines may be impacted.

In scenarios where severe blocking causes infrastructure requirements to increase by more than 20%, Mobius will provide the revised infrastructure cost for Client approval before continuing.

2. Captcha Handling

Captcha-related cost estimates are based on the site's current behaviour.

If the site introduces captcha mechanisms during the crawl, Mobius will estimate the additional captcha-handling cost and seek Client approval prior to proceeding.

3. Login Credentials

Mobius will aggregate data only from the sources authorised and approved by the Client.

If any website requires login access, valid login credentials must be provided by the Client in accordance with Mobius policy.

4. Layout Changes

For websites undergoing major layout or structural changes, setup, crawling, and delivery timelines will be revised.

Work will resume only after Client approval of the updated effort estimates.

Such sources may be temporarily excluded from scheduled deliveries until setup and initial delivery are complete.

5. Legal Restrictions

If a website fully blocks or prohibits data retrieval through permissible and legally compliant means, Mobius will consider the source "non-feasible" for aggregation.

In such cases, Mobius reserves the right to classify the source as out-of-scope and will notify the Client accordingly.
