

Threat modelling pricing

Threat modelling pricing Sept 2025

All prices RRP

Our pricing is outcome-based, with services **defined up front** and **fixed fees** giving you certainty of value.

Very low complexity

£3,750

Low complexity

£7,500

Medium complexity

£12,500

Guaranteed delivery

We deliver all threat models within 4 weeks as standard.

High complexity

£17,500

Very high complexity

£25,000

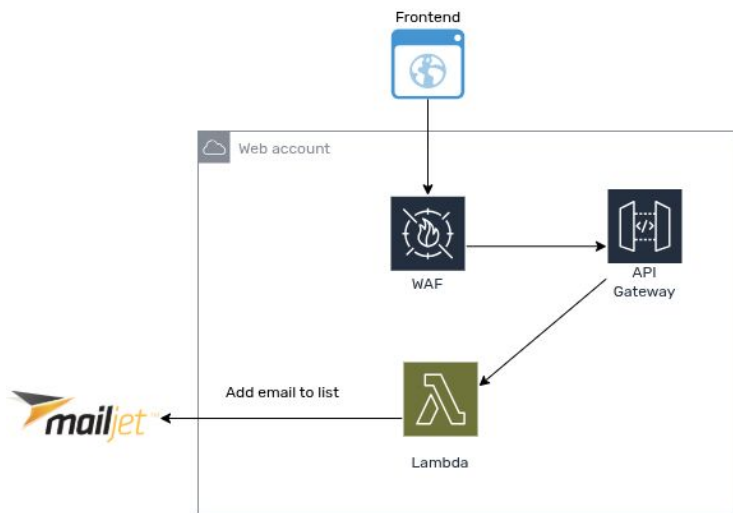

Urgent requirements

Need your threat model in a hurry? No problem, speak to us about a 2-week delivery before booking.

COMMERCIAL IN CONFIDENCE

Very low complexity example

Components: ≤ 4 | Data flows: ≤ 6 | Supply chain: ≤ 1

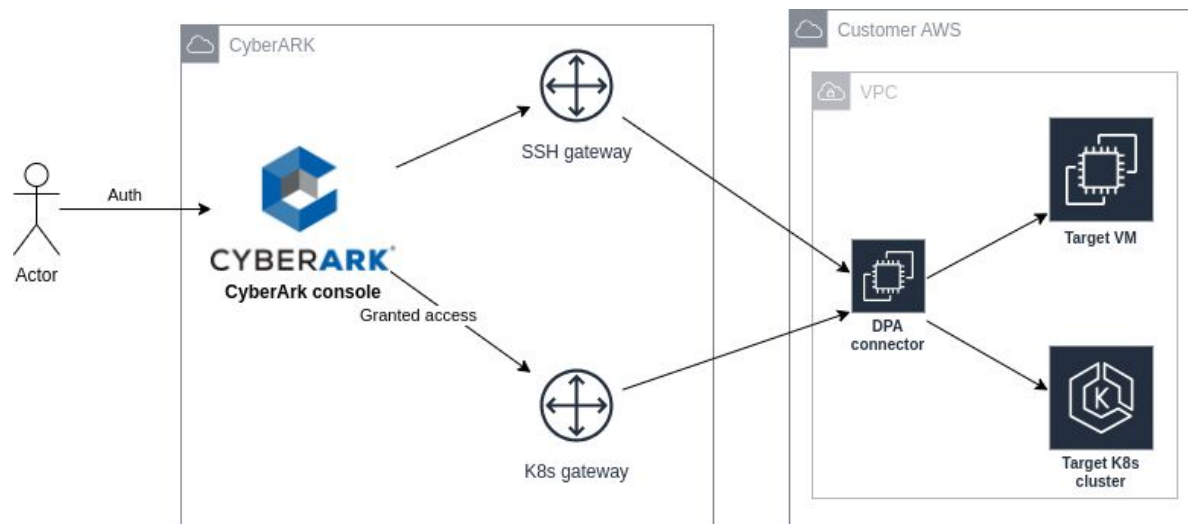

Threat modelling is very flexible: **You do NOT need to fully know** your system design or complexity to get started. We'll discuss this with you prior to booking.

Notes All examples and metrics given are a guide only. Complexity measures our understanding of complexity to deliver your threat model. This allows us to take the risk for you: if the system turns out to be a little more complex than anticipated, as long as it remains within the same level of complexity, we will never charge more to deliver. Significant changes in complexity discovered during threat modelling, that move a model up to another band, may mean we need to de-scope items with you or charge more, but only with the pricing set out in this document, to give you as much certainty as possible.

COMMERCIAL IN CONFIDENCE

Low complexity example

Components: ≤ 10 | Data flows: ≤ 10 | Supply chain: ≤ 2

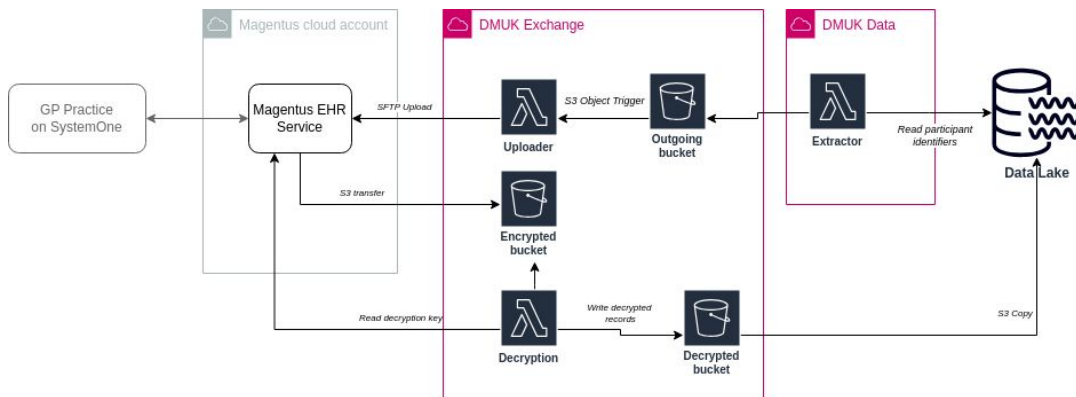

Threat modelling is very flexible: **You do NOT need to fully know** your system design or complexity to get started. We'll discuss this with you prior to booking.

Notes All examples and metrics given are a guide only. Complexity measures our understanding of complexity to deliver your threat model. This allows us to take the risk for you: if the system turns out to be a little more complex than anticipated, as long as it remains within the same level of complexity, we will never charge more to deliver. Significant changes in complexity discovered during threat modelling, that move a model up to another band, may mean we need to de-scope items with you or charge more, but only with the pricing set out in this document, to give you as much certainty as possible.

COMMERCIAL IN CONFIDENCE

Medium complexity example

Components: ≤ 12 | Data flows: ≤ 12 | Supply chain: ≤ 3

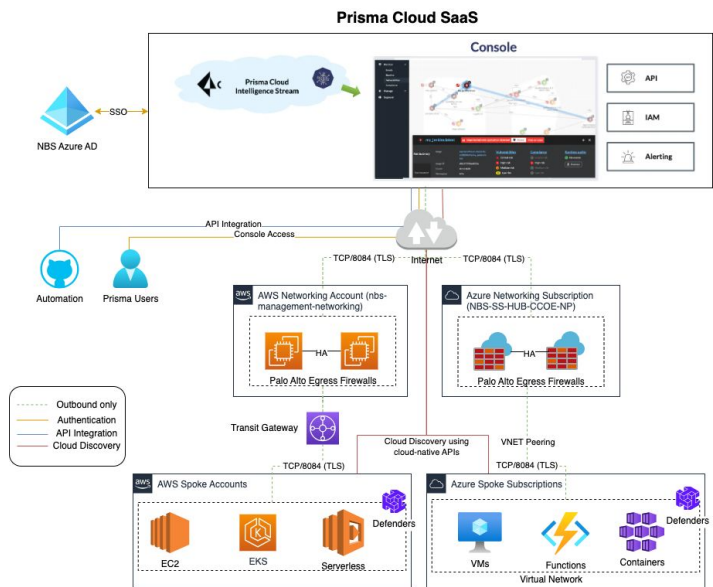

Threat modelling is very flexible: **You do NOT need to fully know** your system design or complexity to get started. We'll discuss this with you prior to booking.

Notes All examples and metrics given are a guide only. Complexity measures our understanding of complexity to deliver your threat model. This allows us to take the risk for you: if the system turns out to be a little more complex than anticipated, as long as it remains within the same level of complexity, we will never charge more to deliver. Significant changes in complexity discovered during threat modelling, that move a model up to another band, may mean we need to de-scope items with you or charge more, but only with the pricing set out in this document, to give you as much certainty as possible.

COMMERCIAL IN CONFIDENCE

High complexity example

Components: ≤ 18 | Data flows: ≤ 15 | Supply chain: ≤ 4

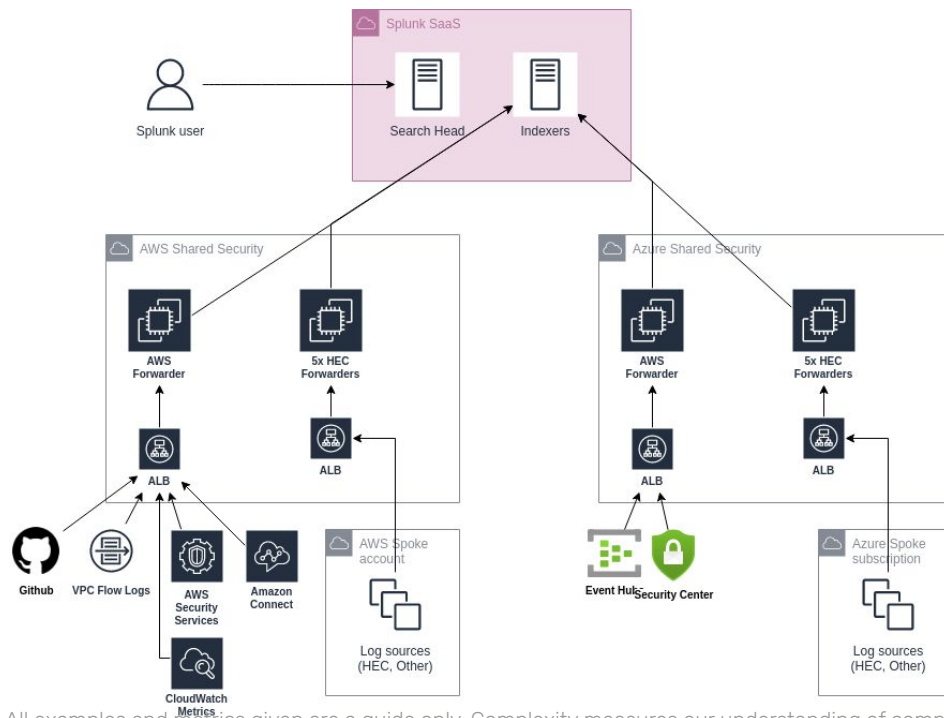

Threat modelling is very flexible: **You do NOT need to fully know** your system design or complexity to get started. We'll discuss this with you prior to booking.

Notes All examples and metrics given are a guide only. Complexity measures our understanding of complexity to deliver your threat model. This allows us to take the risk for you: if the system turns out to be a little more complex than anticipated, as long as it remains within the same level of complexity, we will never charge more to deliver. Significant changes in complexity discovered during threat modelling, that move a model up to another band, may mean we need to de-scope items with you or charge more, but only with the pricing set out in this document, to give you as much certainty as possible.

COMMERCIAL IN CONFIDENCE

Very high complexity example

Components: ≤ 30 | Data flows: ≤ 20 | Supply chain: ≤ 6

Threat modelling is very flexible: **You do NOT need to fully know** your system design or complexity to get started. We'll discuss this with you prior to booking.

Notes All examples and metrics given are a guide only. Complexity measures our understanding of complexity to deliver your threat model. This allows us to take the risk for you: if the system turns out to be a little more complex than anticipated, as long as it remains within the same level of complexity, we will never charge more to deliver.
