Additional fee per user	£200 pa / user

Implementation, training and custom integrations

Customer implementation costs and timescales require preliminary feasibility work to determine the scope of each implementation programme, including scoping work to implement customer-specific EPR/EMR integrations. We provide a **free**, Planning and Feasibility Assessment, in order to determine these costs, prior to contract. All implementation costs will be quantified based on the following rates:

Licence Type	Hourly Rate	Half Day Rate	Full Day Rate
Integration Consultancy (engineer)	£250	£750	£1400
Project Manager	£250	n/a	£600
Remote Trainer	£120	n/a	n/a
Onsite Trainer	n/a	n/a	£500

Lyrebird Health delivers a structured implementation that starts with discovery and workflow mapping, so your clinicians use the ambient scribe where it has the most impact. The team configures templates, specialties, vocabularies and user profiles, then connects to your core systems such as EPR, PAS and SSO. Data protection, clinical risk, and technical assurance are covered through DPIA support, DCB0129 clinical safety, test environments, and integration testing before any at-scale rollout.

Training focuses on rapid adoption and sustained usage. Lyrebird provides role based training for clinicians, admins and IT, combining live classroom or virtual sessions with short workflow videos and in-app guidance. Super user and train the trainer models give customer local experts in each department. During go live, floor walking and drop in clinics support clinicians in real time, while adoption dashboards, feedback loops and optimisation sessions help you refine prompts, templates and workflows so the solution keeps improving after launch.
