Pricing Catchup Applications KG

07th of January 2026

The price scales with hospital size and the modules selected (e.g., multi-site maps, EPR integration, kiosks).

As an illustration, for a 500-bed acute hospital I charge £11,900 one-off for implementation (mapping, configuration, training) and £480 per month for the SaaS licence covering hosting, security updates and support.

Optional modules are priced separately. Multi-site and multi-year discounts are available. There are no per-patient fees, and I provide transparent statements of work to avoid hidden costs.
