Service Title: CISO as a Service

Service Description:

Wuluf Ltd offers a premium CISO-as-a-Service solution designed to provide organisations with strategic security leadership, crisis readiness, and compliance expertise without the cost and commitment of a full-time executive hire.

Delivered by security-cleared Chief Information Security Officers with extensive experience across the Ministry of Defence (MOD) and UK Government environments, our service maintains the highest standards of governance, risk management, and cyber resilience. Whether you require interim leadership, strategic guidance, or augmentation of your existing security team, Wuluf delivers tailored solutions aligned to your business objectives and regulatory obligations.

Our approach brings immediate value by giving you access to top-tier expertise at a fraction of the cost of a permanent CISO. We rapidly deploy seasoned professionals who can quickly address urgent security challenges, ensuring your organisation remains protected and compliant. This enhances alignment with MOD, government, and industry standards, reduces audit and regulatory risks, and strengthens your overall security posture.

Address: Wuluf Ltd, The Limes, Bayshill Road, Montpellier, Cheltenham, GL50 3AW
Company Number: 15247265
Website: www.wuluf.com

All initiatives are aligned with business goals to ensure measurable value and a clear return on investment. With scalable engagement options, our service evolves with your organisation's needs.

Wuluf provides a comprehensive suite of outputs, including the development of a long-term security strategy and roadmap tailored to your organisation. Our risk assessment and management methodology identifies and prioritises organisational risks, enabling proactive mitigation. We develop, align, and implement robust security policies, standards, and governance structures that support compliance and operational integrity. Our incident response planning ensures your organisation can detect, respond to, and recover from cyber threats efficiently and effectively.

When a major cyber incident occurs, leadership requires clarity, speed, and confidence. Wuluf establishes a clearly defined crisis governance model that connects senior leadership and the board with technical response teams, ensuring that decisions are timely, informed, and properly logged for legal and regulatory defensibility. Throughout the crisis, our team guides you from initial assessment and containment through to recovery and stakeholder engagement. We craft communication tailored to customers, staff, regulators, and the media, balancing transparency and trust. Our decision-making frameworks help executives evaluate options quickly without becoming overwhelmed by technical details. All crisis support aligns with recognised standards such as ISO 27035, BS 11200, and NCSC guidance, and is tailored to your sector's regulatory environment. Following an incident, we deliver a full review and practical recommendations that strengthen future resilience.

To embed cyber resilience at leadership level, Wuluf offers a board-focused cybersecurity training programme that builds strategic understanding and decision-making confidence. The programme covers the evolving threat landscape, regulatory obligations, governance principles, and technical fundamentals such as identity, encryption, and cloud security. Training is interactive, using realistic table-top exercises that simulate high-impact incidents, giving executives the opportunity to experience pressure-based decision-making first-hand. We support leaders in setting risk appetite, prioritising investment, and challenging assumptions about their organisation's security posture. The outcome is a leadership team capable of discussing cyber risk in business terms and leading confidently during crises. In addition, Wuluf strengthens cyber risk governance by helping organisations understand their true risk exposure, regulatory obligations, and resilience gaps. We assess your existing governance and reporting model and design frameworks that align with standards such as ISO 27001 and NIST CSF. Reports are presented in clear business language, highlighting material risks, trends, and progress against remediation activities. We also create prioritised roadmaps to ensure resources are directed where they have the greatest impact. This results in improved visibility, quicker decision-making, and stronger assurance for stakeholders and regulators. Wuluf Ltd stands apart through its proven expertise in high-security environments, the calibre of its security-cleared professionals, and its commitment to best practice and continuous improvement. Our flexible engagement models ensure that we deliver client-centric solutions tailored to your unique requirements, enabling organisations to operate with confidence and resilience in an increasingly complex threat landscape.
