KLARYTEE

DATA CENTRIC SECURITY, PRIVACY AND INTELLIGENCE.
FOR AI SYSTEMS AND ALL DATA ENVIRONMENTS

Our Company

Klarytee Ltd is a software company transforming data governance with data-centric security technologies.

As the digital world becomes ubiquitous and data becomes pervasive and difficult to control, Klarytee redefines data governance through data-centric security, privacy, and intelligence, enabled by continuous data discovery and classification.

Klarytee moves control inside the data. Klarytee applies fragment-level encryption and policy binding directly to the data layer. Protection and governance travel with the data, generating continuous intelligence about how it is used and shared. This delivers unified cybersecurity, data privacy, and intelligence that persist wherever the data flows.

DATA DISCOVERY AND CATALOGING - Klarytee continuously discovers and classifies sensitive data at fragment level across structured and unstructured sources, creating live context and visibility of an organisation's sensitive data assets.

DATA SECURITY - Klarytee shifts security from infrastructure to data itself. Each fragment carries its own cryptographic protection, persisting beyond network and application boundaries.

DATA PRIVACY - Klarytee enforces compliance without destroying utility. Policies for purpose, consent, and jurisdiction embed with the data, preserving full analytical and AI value.

DATA INTELLIGENCE - Klarytee captures every data access and transformation, generating native audit trails and insights—turning protection into continuous observability and control beyond enterprise boundaries.

Why Organisations Choose Klarytee:

AI Performance Maintained - Klarytee's fragment encryption avoids the heavy latency and scaling penalties of masking, tokenisation, and full-file encryption. Only the protected fragments are evaluated for access, keeping AI pipelines fast and lightweight.

Workflow Optimised - Klarytee encrypts and governs fragments directly in Microsoft 365 or via API. No redaction, no copies. Only authorised fragments decrypt at access, removing sanitised versions and manual checks. Files move securely across teams, systems, and AI without changing workflows.

Cost Reduction - Klarytee's approach eliminates the need for token vaults, duplicate documents, and manual compliance processes. It reduces storage, admin overhead, and secure data usage cost — including for AI integration.

KLARYTEE

DATA CENTRIC SECURITY, PRIVACY AND INTELLIGENCE.
FOR AI SYSTEMS AND ALL DATA ENVIRONMENTS

2026 Pricing Model

Enterprise Licence (up to 1,000 users)

Component	List Price (Volume discounts available)
Platform Fee Private instance, governance, intelligence	£50,000/year
Creator Licences Full encryption and governance capabilities	£19.50/user/month
Collaborator Access Decrypt-only for external recipients	Unlimited
Integration Services Data store, identity, KMS etc.	<i>Time & materials</i>
Total Annual Value	£120,200

Premium Capabilities Included

Klarytee delivers enterprise-grade data protection with capabilities that go beyond traditional DLP and encryption solutions:

- ✓ **Private Hosted Instance** — dedicated environment, not multi-tenant
- ✓ **Patented Fragment Encryption** — protection at data layer, not file level
- ✓ **AI-Powered Classification** — automated sensitive data detection

- ✓ **Real-Time Intelligence** — continuous audit trails and usage insights beyond enterprise boundary
- ✓ **Unlimited Collaborator Access** — no per-recipient fees for clients
- ✓ **No Implementation Fees** — onboarding included in platform
