

Virtual Technology Team Service

On-Demand, Multi-Skilled Technology Capability
Company 86 | www.c86.tech

Executive Summary

The C86 (Company 86) Virtual Technology Team service, provides organisations with access to a complete, multi-disciplinary technology capability delivered as a flexible, scalable service. Rather than relying on individual roles, the service enables organisations to draw on a full team of multi-disciplinary specialists as and when required to uplift maturity, deliver transformational programmes, or operate security on a fully managed basis.

The Changing Operating Environment

Rapid technological advancement is reshaping how organisations operate. Innovations such as cloud platforms, automation, and artificial intelligence (AI) whilst offering significant business benefits also drive new threat vectors and risks if not adopted securely. Many organisations face a myriad of regulatory obligations requiring clear documented reporting of adherence within their own environment and that of their supply chain, particularly during periods of technology transformation.

Transformational programmes and projects often fail as organisations are unable to timely secure the right resources, with the relevant experience, at the right time and on budget with the programme.

Dynamic access to an experienced technical multi-disciplinary technology team provides resilience and depth by bringing together a broad range of specialist skills, ensuring organisations can respond effectively to emerging threats, incidents, and new business requirements over time.

Service Overview

The Virtual technology Team service delivers a readily integrated pool of technology skills and resources aligned to an organisations business needs and requirements. The service can be tailored to support a specific transformation programme, provide ongoing managed services, or offer flexible access to specialist capability on demand.

How the Virtual Security Team Can Be Used

The service can be consumed in multiple ways, including:

- Delivery of a multi-year security transformation programme
- Provision of a fully managed security service
- Augmentation of internal teams with specialist security skills
- Rapid access to expertise during periods of change, growth, or incident response

- Secure technology enablement, including cloud and AI initiatives
- Security training and awareness
- Security assurance of projects and programmes
- Networking specialists, including DevSecOps, Wireless, End Users
- Cloud Data assessments, Managed services including centres
- Modern workplace

- Application development
- Automation
- Infrastructure as code, Network as Code
- AI
- Robotic Process Automation

Delivery Model & Flexibility

The Virtual Technology Team is delivered in a way that evolves alongside the organisation. Capability, capacity, and focus areas can be adjusted over time to reflect changing risks, priorities, regulatory requirements and maturity.

Commercial & Engagement Options

The service can be consumed using a range of flexible commercial models:

- Annual or multi-year managed service engagement
- Flexible draw-down model using a pre-agreed pool of funds
- Ad-hoc, as-and-when support delivered under an agreed security framework

These options ensure the right skills and capabilities are available when needed, without unnecessary overhead.

Key Benefits of a Virtual Technology Team

- Rapid access to a broad, multi-skilled security cleared capability
- Increased resilience through team-based delivery and access to the relevant subject matter experts
- Best-of-breed expertise across required technology domains
- Flexibility to scale capability up or down
- Alignment to evolving threats, risks, regulatory and business requirements
- Reduced reliance on single individuals or hard-to-hire skills

Why C86?

C86 brings deep experience delivering security services across governance, risk, operations, and technology.
