# Virtual Security Team Service

On-Demand, Multi-Skilled Security Capability
Company 86 | www.c86.tech

## Executive Summary

The C86 (Company 86) Virtual Security Team service, provides organisations with access to a complete, multi-disciplinary security capability delivered as a flexible, scalable service. Rather than relying on individual roles, the service enables organisations to draw on a full team of security specialists as and when required to uplift security maturity, deliver transformational security programmes, or operate security on a fully managed basis.

## The Changing Risk, Threat & Operating Environment

The cyber threat landscape is evolving at an unprecedented pace. Threats are becoming more wide-ranging, more targeted, and increasingly sophisticated in nature. Organisation's face a diverse mix of threats, which is increasing in complexity with the adoption of AI. These threats include, advanced persistent threats, ransomware, supply chain compromise, insider risk, and automated attacks leveraging modern tooling and techniques.

Rapid technological advancement is reshaping how organisations operate. Innovations such as cloud platforms, automation, and artificial intelligence (AI) offer significant business benefits, but also introduce new threat vectors and risks if not adopted securely. Many also face a mirid of regulatory obligations requiring clear documented reporting of adherence within their own environment and that of their supply chain.

Organisations are operating in an environment where cyber threats are increasing in scale, sophistication, and frequency. At the same time, business environments, technologies, and regulatory expectations continue to change rapidly. This creates a need for security capability that can adapt quickly without long-term rigidity.

A Virtual Security Team provides resilience and depth by bringing together a broad range of specialist skills, ensuring organisations can respond effectively to emerging threats, incidents, and new business requirements over time.

## Service Overview

The Virtual Security Team service delivers a readily integrated pool of security skills and resources aligned to an organisation's business needs and requirements. The service can be tailored to support a specific security transformation programme, provide ongoing managed security services, or offer flexible access to specialist capability on demand.

## How the Virtual Security Team Can Be Used

The service can be consumed in multiple ways, including:

- Delivery of a multi-year security transformation programme
- Provision of a fully managed security service
- Augmentation of internal teams with specialist security skills
- Rapid access to expertise during periods of change, growth, or incident response

## Security Capabilities Available

The Virtual Security Team can provide a wide range of skills and capabilities, including but not limited to:

- Event and threat detection and monitoring
- Security operations and incident response
- Security governance, policy, and assurance
- Risk management and threat modelling including 3rd party risk
- Technical security control design and architecture
- Security control implementation and configuration
- Security analysts and subject matter specialists
- Secure technology enablement, including cloud and AI initiatives
- Security training and awareness
- Security assurance of projects and programmes

## Delivery Model & Flexibility

The Virtual Security Team is delivered in a way that evolves alongside the organisation. Capability, capacity, and focus areas can be adjusted over time to reflect changing risks, priorities, regulatory requirements and maturity.

## Commercial & Engagement Options

The service can be consumed using a range of flexible commercial models:

- Annual or multi-year managed service engagement
- Flexible draw-down model using a pre-agreed pool of funds
- Ad-hoc, as-and-when support delivered under an agreed security framework

These options ensure the right skills and capabilities are available when needed, without unnecessary overhead.

## Key Benefits of a Virtual Security Team

- Rapid access to a broad, multi-skilled security cleared security capability
- Increased resilience through team-based delivery and access to the relevant subject matter experts
- Best-of-breed expertise across security domains
- Flexibility to scale capability up or down
- Alignment to evolving threats, risks, regulatory and business requirements
- Reduced reliance on single individuals or hard-to-hire skills

## Why C86

C86 brings deep experience delivering security services across governance, risk, operations, and technology. Our Virtual Security Team model combines senior leadership, specialist expertise, and delivery capability to help organisations build resilient, adaptable security functions aligned to business outcomes.
