

IT Modernisation & Transformation Services

People, Process & Technology-Led Programmes for Assured Transformation
Company 86 | www.c86.tech

Executive Summary

The C86 (Company 86) IT Modernisation & Transformation Services help organisations realise the benefits of rapid technological advancement, while actively managing the risks associated with technology adoption. Organisations must evolve their IT environments in a way that is structured, assured, and aligned to real business outcomes across artificial intelligence, automation, data-driven decision-making, cloud, networking, and emerging technologies,

At the heart of successful modernisation and transformation is a balanced focus on people, process, and technology. Most transformation initiatives fail not due to poor technology selection, but because the required business process change, adoption, and cultural alignment have not been fully considered or embedded.

Technology Advancement with Risk-Aware Adoption

Organisations are under increasing pressure to exploit technological advancements in areas such as AI, automation, advanced analytics, and next-generation infrastructure. While these technologies offer significant opportunity, they also introduce new operational, security, and organisational risks if adopted without sufficient structure and governance.

C86 helps organisations strike the right balance—accelerating innovation while ensuring that change is introduced in a controlled, phased, and risk-aware manner aligning with business needs and organisational readiness.

Service Overview

C86 delivers IT modernisation and transformation through structured, programme-led engagements that address people, process, and technology together. Our services enable organisations to transition from their current-state to future-ready environments in a way that is evolutionary, minimally disruptive, and optimised for long-term value.

Modernisation & Transformation Programme Areas

Programmes are tailored to organisational priorities and may include:

Data Centre & Cloud Transformation – Modernising on-premises infrastructure, enabling hybrid or cloud-native platforms, and improving resilience, scalability, and cost efficiency.

Network & Connectivity Modernisation – Redesigning wired and wireless networks as intelligent, secure, and automated platforms capable of supporting increased data volumes and connected devices.

Security & Platform Modernisation – Embedding security by design across infrastructure, platforms, and data to support secure adoption of modern technologies.

Data, AI & Automation Enablement – Establishing modern data architectures and AI capabilities to enable automation, insight-driven decision-making, and competitive advantage.

Emerging Technology Readiness – Assessing and preparing for emerging technologies, ensuring future adoption can be integrated safely and effectively.

The IDEAL Methodology – Enabling Right-First-Time Delivery

All programmes are delivered using C86's proven IDEAL methodology, which enables organisations to plan, structure, deliver, manage, and optimise modernised technology environments in a right-first-time manner.

- **Identify** – Understand the current-state across people, process, and technology, including readiness, risks, and dependencies.
- **Define** – Design future-state architectures, operating models, business processes, and phased roadmaps aligned to organisational goals.
- **Execute** – Deliver change through controlled, phased implementation that minimises disruption and supports adoption.
- **Assure** – Provide ongoing managed services, governance, and assurance to ensure environments remain secure, stable, and effective.

- **Learn** – Continuously optimise through feedback, performance insight, and continual service improvement.

Evolutionary & Phased Delivery Approach

C86 delivers modernisation and transformation programmes in an evolutionary and phased manner. This approach ensures benefits are realised early and continuously, while disruption to business operations is minimised.

Phased delivery allows organisations to adapt to change, validate outcomes, and refine direction as capabilities mature, ensuring sustained adoption and long-term success.

Outcomes & Benefits

- Successful technology adoption driven by people and process alignment
- Reduced transformation risk and operational disruption
- Optimised realisation of benefits from modern technology investments
- Secure, scalable, and future-ready IT environments
- Continuous improvement embedded into service delivery

Why 86?

C86 brings extensive experience delivering complex modernisation and transformation programmes. Our focus on people, process, and technology—combined with our IDEAL methodology—ensures organisations can modernise with confidence, assurance, and measurable success.
