

KeepIt - SaaS Backup that's Immutable, Managed, and Compliant

SaaS platforms like Microsoft 365, Google Workspace, and Salesforce don't offer full protection against data loss. So what happens to your data if your business is hit with ransomware?

KeepIt Cloud Data Protection is a fully managed backup and recovery service that ensures your SaaS data is resilient, compliant, and vendor-independent.

Why most SaaS platforms don't guarantee data recovery

Most SaaS vendors offer limited protection against ransomware, accidental deletion, or compliance failures. Recovery options are often slow, incomplete, or vendor-dependent.

SaaS data risks KeepIt protects you from

- Ransomware & accidental deletion → Immutable, air-gapped backups prevent tampering and ensure recoverability.
- Complex recovery processes → Wizard-driven recovery simplifies and speeds up restoration.
- Regulatory pressure (GDPR, ISO27001, SOC 2) → Built-in compliance features help meet audit and legal requirements.
- Limited vendor recovery options → KeepIt provides independent coverage across major SaaS platforms.
- Operational overhead → Fully managed service reduces internal admin burden.

How KeepIt ensures SaaS resilience

- Resilient, compliant protection for SaaS data.
- Reduced downtime with fast, prioritised recovery.
- Simplified compliance reporting and regulatory adherence.
- Transparent audit trails for accountability.
- Flexible scalability to match organisational growth.
- Fully managed by KeepIt, reducing administrative burden.
