F8 Networks – Service Definition

Google Cloud Migration, Security & Managed Services

Service Overview

F8 Networks provides secure, compliant Google Cloud Platform (GCP) services covering architecture, migration, secure foundations, governance, identity, security, and ongoing operations. The service enables public sector organisations to adopt, secure, and operate GCP and Google Workspace using Google-native security services and best practices aligned with UK government standards.

G-Cloud Lot: Lot 3 – Cloud Support

Service Categories

Set Up and Migration; Security Services; Managed Cloud; Ongoing Support.

Key Features

- Google Cloud architecture design and migration delivery
- Secure GCP foundation using Google-recommended blueprints
- GCP security monitoring, logging, and alerting
- Identity and access management across cloud and workspace
- Google Workspace security administration and controls
- Backup and resilience design for cloud workloads
- Workspace data loss prevention and compliance controls
- Cloud security posture management and threat detection
- Secure API and data platform design reviews

Benefits

- Faster and safer Google Cloud adoption
- Improved visibility of security risks
- Stronger identity and data protection controls
- Improved resilience for public services
- Clear auditability and compliance assurance

Service Constraints

The service is primarily delivered remotely. Onboarding timescales depend on environment size, security requirements, and integration complexity. Some security and compliance features require appropriate Google Cloud or Workspace licensing. Onsite and out-of-hours support is available by agreement.

Support Levels

Standard (business-hours support), Enhanced (priority support with named Google Cloud engineer), and Premium (24×7 support with Technical Account Manager). Support is provided as a fixed monthly service based on scope and criticality.
