About F8 Networks Limited

F8 Networks Limited has a deep understanding of the complexities involved in securing modern IT environments. Our expertise lies in simplifying those complexities and delivering practical, well-governed security services that align technology investment with organisational risk and operational priorities.

We support organisations operating across

Microsoft, AWS, Google Cloud and hybrid environments, providing managed cybersecurity services that are scalable, auditable and designed to meet public sector

Microsoft | aws | Google Cloud

F8 Protective Monitoring – Managed SOC

F8 Protective Monitoring is a fully managed service providing continuous security operations, threat detection and incident response through a dedicated Security Operations. Centre (SOC).

The service integrates SIEM, MDR, XDR, cloud and network monitoring, automation and threat intelligence to detect, investigate and contain cyber threats across the entire digital digital estate. It is designed for organisations that require assured, round-the-clock monitoring without the cost and complexity of building and operating an internal SOC.

SIEM | MDR | XDR | Cloud and network monitoring

What the Servce Delivers

End-to-End Protective Monitoring

The service provides continuous visibility and response across users, endpoints, networks, applications and cloud services.

Core service activities include:

- 24×7 monitoring of security logs, events and telemetry
- Detection of malicious activity and anomalous behaviour
- Analyst-led investigation and triage
- Incident containment and coordinated response
- Ongoing tuning and optimisation of detections

Monitoring is delivered by tiered SOC analysts supported by automation and threat intelligence.

Key Service Features

Service Features

- **24×7 Protective Monitoring** delivered through a managed SOC
- **Tiered SOC** operations with L1, L2 and L3 analyst response
- SIEM monitoring and optimisation, including Microsoft Sentinel, Splunk, QRadar and LogRhythm
- **Integrated EDR, MDR, XDR, NDR** and network traffic analysis
- Cloud security monitoring across Azure, AWS, GCP and Oracle
- **Incident** detection, investigation, triage and containment
- **Case management**, investigation workflows and evidence handling
- **Threat intelligence**, exposure and data leak monitoring
- SOAR automation and security playbook development
- MITRE ATT&CK mapping and detection coverage reporting

Key Benefits

Why Buyers Choose This Service

- Continuous visibility of cyber threats across the full environment
- Faster detection and response, reducing dwell time and impact
- Reduced operational risk and service disripttion
- Clear audit trails supporting assurance and compliance requirements
- Improved detection quality through continuous optimization
- Scalable Protective Monitoring without internal SOC overhead
- Reduced false positives through automation and analyst-led triage
- Stronger security posture through proective threat hunting
- Improved confidence for senior stakeholders and assurance teams,

Support and Service Levels

F8 provides tiered support aligned to service criticality and organisational needs.

Standard Support

- ✓ 24×7 monitoring
- ✓ Incident detection, triage and response
- ✓ SOC analyst support
- ✓ Standard reporting

Enhanced Support

- ✓ Faster response times
- ✓ Priority incident handling
- ✓ Enhanced reporting
- ✓ Named Technical Account Manager

Premium

- ✓ Enhanced service levels
- ✓ Proactive threat hunting
- ✓ Tailored response playbooks
- ✓ Access to senior security engineers
- ✓ Named Service Delivery Manager

Services are provided as a fixed monthly managed service, with scope agreed during onboarding.

Getting Started

The service is onboarded through a structured and controlled process:

Onboarding is typically delivered remotely by F8 specialists.

Timescales depend on environment size, complexity and the number of data sources in scope.
