ABOUT OUR COMPANY

Building on our strong foundations as a global technical resourcing partner, Addition Solutions developed a dedicated consulting services division, **Add Project**.

Add Project leverages a worldwide network of experienced industry associates, deploying purpose-built, client-specific work packages that enable faster, more effective delivery across the full technology transformation lifecycle.

For over a decade, we have worked alongside senior public sector leaders on the most complex, technology-enabled change and a hard truth persisted across government: Technology investment continues to grow — but accountability for realised value does not.

The issue is not vision or funding. It is the gap between delivery and impact — created by constrained capacity, fragmented accountability, and risk-averse delivery models that optimise activity, not outcomes.

Add Project was built to disrupt that model.

Addition

AddProject

BESPOKE BY DESIGN

Our Three-Tiered Engagement Framework is designed to support at any stage of the transformation journey and to evolve as needs change.

It uses a flexible, modular approach so our clients get the right expertise, at the right time, without committing to more than they need – ensuring progress without excess cost, delay, or risk.

Clients stay in control by choosing the level of engagement that fits their goals, pace, and constraints.

This enables decisive action, sustained momentum, and smart investment – driving impact without overreach.

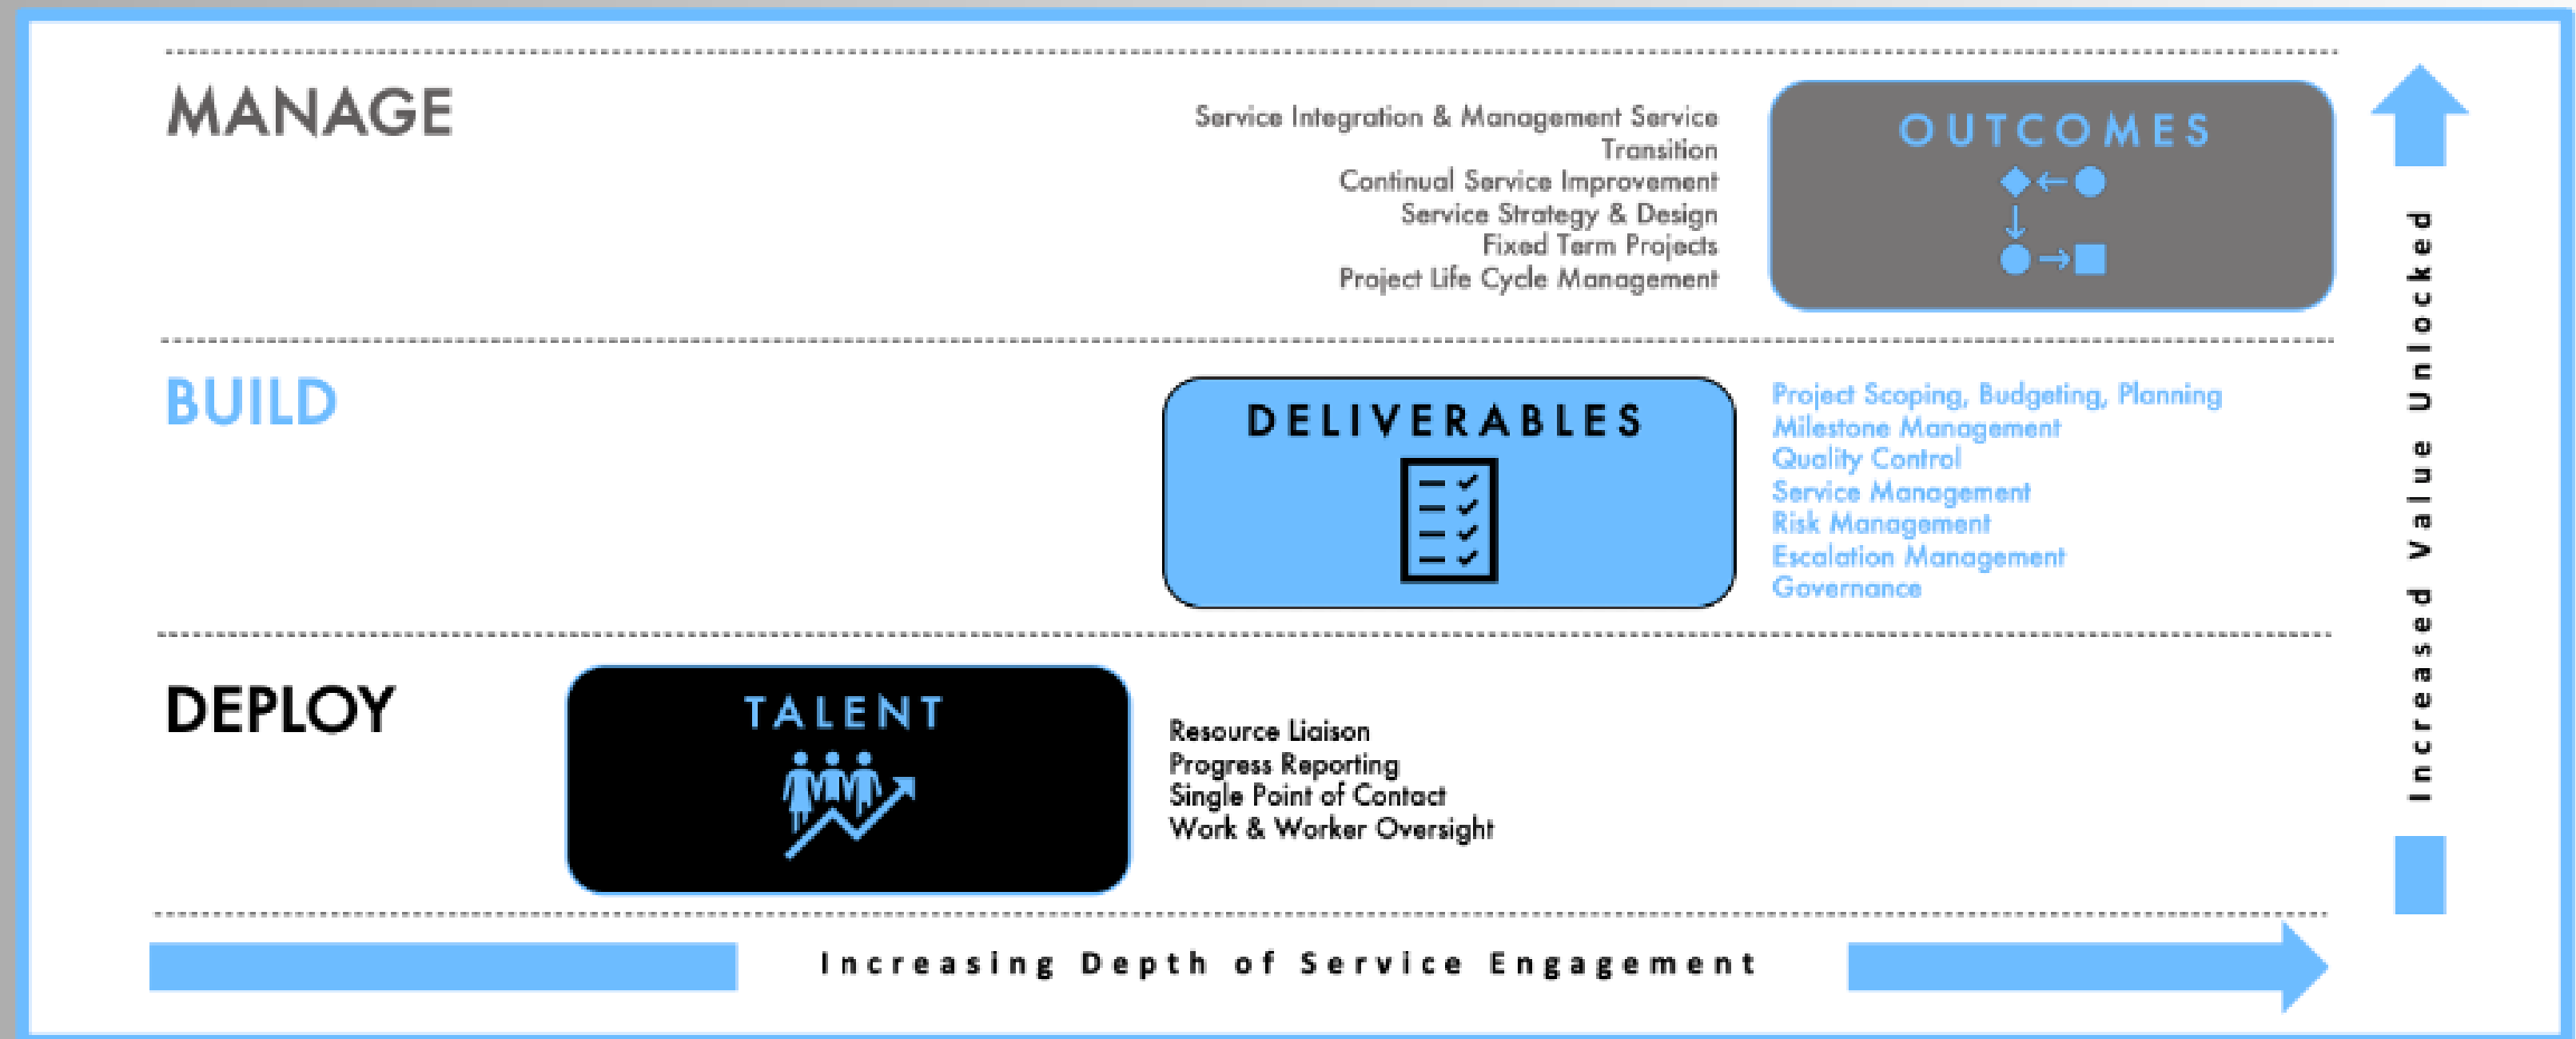

The framework is built to scale, making it easy to deepen or adjust support as priorities shift.

The result is a practical, adaptive partnership that focuses on measurable results and long-term impact, rather than short-term fixes.

WHAT TO EXPECT FROM OUR THREE-TIERED FRAMEWORK

HOW WE SUPPORT

Addition
AddProject

DEPLOY gives fast access to specialist independent consultants, aligned to your priorities, with oversight on every engagement.

Includes:

- Resource onboarding & liaison
- Work assignment tracking
- Progress reporting
- Single point of contact
- Issue escalation & resolution

BUILD adds full project and delivery management to Deploy, ensuring consultants deliver the right work on time and at the right quality.

Includes everything in Deploy, plus:

- Scope & backlog management
- Budgeting & scheduling
- Milestone & dependency tracking
- Quality assurance & performance metrics
- Risk, issue & change management

MANAGE offers full delivery accountability, driving outcomes and optimizing performance across the entire lifecycle.

Includes everything in Deploy & Build, plus:

- Outcome ownership & KPI/OKR alignment
- Service & supplier management
- Continuous service improvement
- Operational reporting & executive dashboards
- Fixed-price / outcome-based engagements
- Full governance & compliance

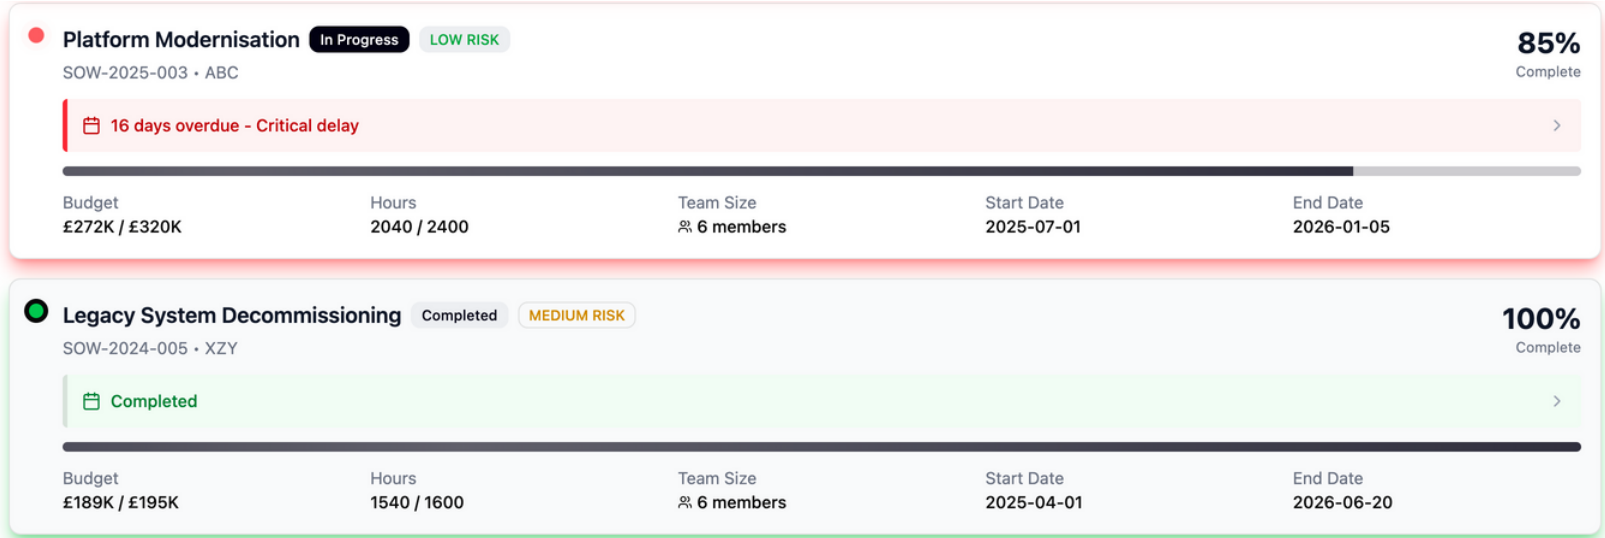

ENSURING MEASURABLE ADVANTAGE

Our AI-powered performance tracker gives you real-time clarity into consultant activity, deliverables, and value creation.

By continuously monitoring scope, milestones, and outcomes, it exposes risk early, enforces accountability, and eliminates costly surprises.

The result: fewer overruns, stronger performance, and confidence that every consultant, commitment, and investment is driving measurable, business impact.

SECURITY SERVICES

(STRATEGY, RISK, DESIGN, INCIDENT, AUDIT AND TESTING)

Addition
AddProject

Addition via Add Project provides end-to-end security services, from strategy and risk management to secure design, assurance and incident response.

We align controls to business outcomes and regulatory needs, embed security into delivery, and provide clear reporting, remediation plans and continuous improvement across cloud, applications and data.

SECURITY SERVICES

(STRATEGY,
RISK, DESIGN,
INCIDENT,
AUDIT AND
TESTING)

Features

- Security strategy aligned to organisational risk appetite
- Threat modelling, risk registers, and mitigation tracking
- Secure architecture reviews and security-by-design patterns
- Security incident playbooks, triage, containment and recovery
- Audit support, evidence packs, and compliance reporting
- Penetration testing coordination and remediation verification
- Vulnerability management, patching guidance, configuration hardening
- Access control reviews and privilege management
- Security KPIs, dashboards, and executive governance
- Security QA embedded into delivery and change processes

Benefits

- Reduced likelihood and impact of security incidents
- Clear compliance posture for audits and regulations
- Faster secure delivery through embedded controls
- Improved resilience with tested response and recovery
- Better risk decisions with prioritised security insights
- Lower remediation costs through early design assurance
- Greater stakeholder trust via transparent governance
- Consistent security across cloud, apps, and data
- Reduced vulnerabilities through proactive hardening
- Improved service quality with security QA and testing
